

## God-Man Theory

A pioneering group of Neothink® scientists will eventually look again at the enormous data collected on our Universe while asking a new set of questions based on: “What if God-Man controlled the cosmos?” (God-Man is a term used by Mark Hamilton to describe advanced conscious life.)

The scientifically sound theory was originated by Dr. Frank R. Wallace in his Neo-Tech® writings (taught in the Neo-Tech® Deep Dive, see Profit Zone.) His theory in essence logically demonstrates why consciousness is an integral component of the Universe as are energy and matter. Dr. Wallace believed enough data currently exists that, if closely looked at while asking a different set of questions, the data will *prove* that consciousness ultimately controls the cosmos. The most probable way the proof will come: by showing that, through the unconscious, uninfluenced Laws of Nature, something can *not* be the way it is...meaning humanlike consciousness or God-Man altered the course of nature, perhaps interdicting a threatening, natural catastrophe that would wipe out life.

When the proof comes, civilization will dramatically shift away from the current irrational, political anticivilization to the Twelve Visions World — tomorrow’s purely rational, businesslike civilization after the Prime-Law Amendment (see NeoTrend 11). Nothing before or after will affect the ordinary person more...not Copernicus who led the way out of the Dark Ages, not Newton who led the way into the Age of Reason, not Einstein who led the way for modern electronics. Nothing before or after will catapult the prosperity of the ordinary person more than proving the God-Man Theory and his Civilization of the Universe.<sup>1</sup> And *you* can become that person who led the way into the C of U.

But first, why? Why will proving the God-Man Theory catapult

<sup>1</sup>The Civilization of the Universe is the purely rational, initiatory-force-free civilization of advanced civilizations throughout the Universe. Once mankind technologically advances to the point of nuclear power and nuclear weapons, civilization faces the Nuclear Decision Threshold as first identified by Dr. Wallace in his *Neo-Tech Discovery* and later adopted by Carl Sagan in his *Cosmos*. To advance beyond that threshold when civilization has the power to destroy itself, a

*(footnote continued on next page)*

the prosperity of the ordinary person?

That proof will make the political no-initiatory-force structure of the Twelve Visions Party (NeoTrend 11) and the drive for Project Life (NeoTrend 13) the *natural order of things*.

The acceptance of the Twelve Visions Party with its Prime Law would mean rising wealth for everyone, even for the poor, as demonstrated in the TVP Platform (NeoTrend 11), and the acceptance of Project Life (NeoTrend 13) would eventually mean near-perfect health, rapidly increasing longevity, and eventual non-aging (even reverse-aging) biological immortality for everyone, including and especially for the elderly. People, by the way, would be deeply happy. In the new prosperity explosion, they would be enjoying exhilarating creation-driven lives (NeoTrend 19) and exciting romantic-love relationships. Those ordinary people would now *want to live forever!* (To understand this and experience it NOW, you need to acquire Level Two in the Profit Zone. [Click Here!](#))

Dr. Wallace's tragic accident that took his life far too soon ended his two exciting projects next on his agenda. The first was a publication he planned to write called Neo-Tech® Bullets that he has referenced in his published writings. The second project was to prove, from studying existing data on the cosmos, that conscious life ultimately controls the cosmos. I encourage scientists, physicists to pursue this wide-open opportunity. Even amateur physicists can join this exciting new research and pool their efforts in the Neothink® Clubhouses.

---

*(footnote continued from previous page)*

Prime-Law World of no initiatory force (see NeoTrend 11) will have to rise before mankind wipes itself out with nuclear weapons. Dr. Wallace explains in his writings how honesty and rationality will have to universally replace dishonesty and irrationality. If not, if the Prime Law does not replace the rule of man, leaving the dishonesty and irrationality of the ruling classes around the world controlling nuclear weapons that can wipe out most human life on Earth...then civilization will not make it. It will destroy itself.

Nuclear-Decision-Threshold civilizations such as on Earth that do not remove rule of man with the Prime Law (see NeoTrend 11) do not get past their power to destroy themselves. They do not advance further and join the other civilizations that have advanced beyond their Nuclear Decision Thresholds by eradicating initiatory force and the rule of man with the Prime Law...and eventually eradicating dishonesty and irrationality throughout the conscious race.

## New Words and Concepts

**Zon** is a collective word related to the fully integrated honesty of Neo-Tech and comprises (1) the Civilization of the Universe, (2) those operating from its wide-scope perspective, and (3) the power required to control existence — the integrated power to gain limitless wealth and eternal happiness. ...Zon is the mind of God. *Zon is you!*

**Zonpower** is the power to control (*not* create) existence. Zonpower is derived from applying the fully integrated honesty and wide-scope accountability of Neo-Tech to all conscious actions.

**Neo-Tech** is a noun or an adjective meaning *fully integrated honesty* based on facts of reality. Neo-Tech creates a collection of *new techniques* and *new technology* that lets one know exactly what is happening and what to do for gaining honest advantages in all situations. Neo-Tech provides the integrations to collapse the illusions, hoaxes, and irrationalities of any harmful individual or institution.

**Objectivism** is the philosophy for the well-being of conscious beings — the philosophy based on reason — the new-world philosophy of limitless prosperity.

**Anticivilization** is the irrational civilization gripping planet Earth — an unreal civilization riddled with professional value destroyers causing endless cycles of wars, economic and property destructions, unemployment and poverty, suffering and death. The essence of the anticivilization is dishonesty. ...Through Neo-Tech, the Civilization of the Universe will replace Earth's anticivilization.

**Civilization of the Universe** is the rational civilization throughout the universe — a civilization filled with value producers providing endless cycles of wealth, happiness, and rejuvenation for everyone. ...Professional value destroyers and parasitical elites are nonexistent in the Civilization of the Universe.

**Parasitical Elites** are unnatural people who drain everyone. The parasitical-elite class lives by usurping,

## *New Words and Concepts*

swindling, and destroying values produced by others. Their survival requires political-agenda laws, armed bureaucracies, ego-“justice” systems, and deceptive neocheating.

**Neocheating** is the undetected usurpation of values from others: the unsuspecting swindling of money, power, or values through deceptive manipulations of rationalizations, non sequiturs, illusions, and mysticisms. ...All such net harms inflicted on society can now be objectively measured by the wide-scope accounting of Neo-Tech.

**Subjective Laws** include political-agenda laws conjured up by politicians and bureaucrats to gain self-serving benefits, ego props, and unearned power. Enforcement of political-agenda laws requires the use of force and armed agents against innocent people. ...The only purpose of such laws is to violate individual rights in order to parasitically gain values produced by others.

**Objective Laws** are not conjured up by politicians or bureaucrats. Instead, like the laws of physics, they arise from the *immutable laws of nature*. Such laws are valid across space and time, benefit everyone, and advance society. Objective laws are based on the moral prohibition of initiatory force, threats of force, and fraud as constituted on page 188. ...The only rational purpose of laws is to protect individual rights.

**Ego “Justice”** is the use of political-agenda laws to gain parasitical livelihoods and feel false importance. Ego “justice” is the survival tool of many politicians, lawyers, and judges. Ego “justice” is the most pernicious form of neocheating. ...Parasitical elites thrive on subjective laws and ego “justice” to the harm of everyone else and society.

**Cassandra’s Secret** revealed through Zon is the power of the conscious mind to accurately, nonmystically foretell the future. How? Through the mind’s power to control its own existence...thus, its own future.

### *New Words and Concepts*

**Intelligence** is redefined by Neo-Tech as the *range of integrated thinking*. The range, width, or scope of valid integrations is more a function of honesty than of IQ. No matter how high is one's raw IQ, that person can ultimately be outflanked and outperformed by a lower IQ mind that is more honest, allowing wider-scope integrations. In the Civilization of the Universe, wide-scope integrations are what give conscious minds unlimited power. Neo-Tech intelligence supersedes the role of IQ detailed by Richard J. Herrnstein and Charles Murray in their controversial, best-selling book *The Bell Curve* (Simon & Schuster, 1994). Since fully integrated honesty, not IQ, is the key to long-range success and abiding happiness, all races have equal access to the limitless prosperity available from the Civilization of the Universe.

**Purpose of Existence and Motive for Controlling Existence:** Achieving and expanding happiness is the moral purpose of conscious life.<sup>1</sup> Happiness, therefore, is the ultimate motivator behind conscious-controlled existence. But, to control existence, one must realize that existence itself is *never* derived from thoughts or emotions. Instead, thoughts and emotions, including happiness, are *always* derived from the conscious control of existence. Thus, conscious control of existence is ultimately directed toward creating limitless prosperity, rejuvenated life, and eternal happiness for everyone and society.

---

<sup>1</sup>As identified in Aristotle's *Nicomachean Ethics*, happiness is the highest moral *purpose* of conscious life. ...Life is the moral *standard*. Reason is necessary for human survival. Reason *and* honesty are required to achieve happiness.

# MOVEMENT I

## Neo-Tech Physics

### *The Foundation*

The main body of text for Neo-Tech Physics is simplified for the general, nonscientific reader. Moreover, Neo-Tech physics is but one of several major metaphorical points made in the text. Those interested in knowing the full context in which the physics is presented must carefully read all of the technical footnotes.

### **The Goal and Purpose of Neo-Tech/Zonpower**

The goal of Neo-Tech/Zonpower is to cure the interwoven disease of irrationality and dishonesty.

The purpose of Neo-Tech/Zonpower is to have conscious individuals think about and see everything in a different way — different from the losing way in which everyone on this planet has been chained for the past 3000 years. Indeed, Neo-Tech/Zonpower is a new way of thinking, a new way of seeing everything, a new mode of action that leads to limitless, beneficent power over existence.

Again, “Zonpower” is not a treatise on physics or philosophy. Physics and philosophy are used as metaphors to explain the omnipotent paradigm called Neothink, which is wide-scope, integrated thinking and honesty. The fully integrated honesty part of Neothink is called Neo-Tech. Since fully integrated honesty will increasingly rule cyberspace, Neo-Tech will increasingly banish false biases and illegal authorities from government, business, science, education, politics, philosophy, communication, the arts. ...Zonpower uniquely has no leaders or followers. In cyberspace, every conscious individual will eventually become an individual self-leader living in a value-producing, business mode.

The metaphorical hypotheses in this first section may seem radical. Indeed, some hypotheses are radical and have no direct evidence as of yet. Still, nothing in Neo-Tech contradicts the laws of physics and all radical concepts will eventually be mathematically and experimentally demonstrated, modified, or falsified.

### Existence Exists as Gravity Units

Gravity Units are the fundamental units of existence. They are indivisible, windowless units of submicroscopic, quantized geometries from which nothing can enter or exit. Yet, those geometries exist continuously — as a quantum-blended whole through wave-like dynamics and smeared-out resonances. Also, manifestations of certain Gravity Units could form the weakly interacting dark material that accounts for the missing mass in modern cosmological theories. And finally, each Gravity Unit can flux into a universe of gravity, mass, energy, and consciousness.

*All wealth arises from conscious-controlled Gravity Units.*

# Chapter 1

## Boundless Prosperity

through  
SIGUs and Googolplexes

What are SIGUs and googolplexes? What connection do they have to boundless prosperity? First ask: How do conscious beings meet the energy and communication requirements of an eternally advancing civilization? How does one unleash nature's power to achieve near instant communication throughout the universe? How can one capture the power of universes spanning billions of light years across? How can one unleash the universal power locked in gravity units lurking beneath every subatomic particle? How can one direct the power of Super-Inflation Gravity Units<sup>1</sup> (SIGUs) to eternally expand life and prosperity?

### Take a Numbers Ride

*Take a ride to the big:* The mathematical term googol is the number 1 followed by a hundred zeroes, or  $10^{100}$ , meaning 10 raised to the power of a hundred.<sup>2</sup> How big a number is a googol? Astronomers estimate our universe is 15 billion years old...or  $10^{18}$  seconds old. Over 22 centuries ago, Archimedes calculated that  $10^{63}$  grains of sand would fill the then known universe.

Consider today's known universe contains at least a hundred-billion galaxies each containing an average of a

<sup>1</sup>A Super-Inflation Gravity Unit is equivalent to a symmetrical Geometry Unit of the entire universe.

<sup>2</sup>The power of the number 10 means the number of zeros after the number 1. For example, 10 raised to the power of 2 or  $10^2$  means 100,  $10^3$  means 1000,  $10^{100}$  means 1 followed by a hundred zeros,  $10^{10^{12}}$  means 1 followed by a trillion zeros. Likewise,  $10^{-3}$  is  $1/10^3=.001$ . Also,  $10^{-43}$ , for example, is a decimal point followed by 42 zeros then the number 1. ...Human life expectancy is about  $2 \times 10^9$  seconds. The passing of a light wave takes about  $10^{-15}$  seconds.

### *Movement I: Neo-Tech Physics*

hundred-billion stars. Now consider the mind-boggling number of electrons, protons, neutrons, and all other matter-and-energy particles in those stars, planets, dark matter...as well as all additional particles scattered throughout space. That number would equal  $10^{86}$  particles, a number still considerably less than a googol! Now, if our entire universe of about fifteen billion light years across were packed *solid* with subatomic particles with zero space between them, the number of particles would rise to  $10^{130}$ .

But, how large is a googolplex,  $10^{10^{100}}$ ? Just to print the number of zeroes after the number 1 would require enough paper to pack solid our entire universe, fifteen billion light years across.<sup>1</sup> ...And a super googolplex is a googolplex that is raised to an additional 100<sup>th</sup> power. No scale is available for any conscious mind on Earth to grasp such a number.

*Now take a ride to the small:* Slice an average-sized pie in half ninety-one times. On the ninety-second slice, you would need to slice the nucleus of an atom in half. How small is the nucleus of an atom? Enlarge a baseball to the size of Earth. One would then see the atoms of that baseball as the size of cherries filling the entire planet. Now, enlarge one of those atoms to the size of the Astrodome. The nucleus would then become visible as the size of a grain of sand.

What about the smallest or shortest unit of time that the human mind can grasp: Planck's time of  $10^{-42}$  of a second — about the time required for light travelling at 186,281 miles per second to traverse the diameter of the smallest subatomic particle of, say, a  $2 \times 10^{-33}$  centimeter

---

<sup>1</sup>Roger Penrose calculated that to emulate all possible quantum states of the known universe would require  $10^{10^{123}}$  bits of information — the maximum capacity for the Universal Computer.

### *Boundless Prosperity*

diameter, which is Planck's length. A time less than  $10^{-42}$  of a second measured from the *theoretical* beginning of time in our universe<sup>1</sup> cannot be experimentally simulated or conceptually grasped.

Finally, grasping the smallest and the biggest in terms of eternity requires the axiomatic fact that *existence exists*. Thus, existence has no prior cause and is eternal. Relative to eternity, the smallest unit and the largest unit are equal in occurrence, time, or distance. For example, compare an incredibly fast event that occurs once every  $10^{-42}$  of a second to an incredibly slow event that occurs once every googolplex years. The occurrence of those events are equal in eternity. For, each of those events will occur an "infinite"<sup>2</sup> number of times in eternity.

The smallest units of existence, such as quarks and electrons or the even smaller Gravity Units as explained in Chapters 5 and 7, to the largest expansion of the universe with everything in between and beyond are all a part of eternal existence. Gravity Units, quarks, subatomic particles and energies; protons, neutrons, and electrons; electromagnetism, nuclear forces, and gravity; universes, galaxies, stars, and planets; atoms, molecules, and compounds; gasses, liquids, and solids; air, water, and land; mountains, oceans, and clouds; protoplasm, amoeba, plants, fish, animals, primates, *and conscious beings*...all are part of existence and its natural evolution that has occurred eternally. Indeed, each and every entity of existence has existed forever. Thus, conscious beings as entities of existence have also existed forever throughout the universes as described in Chapter 6 and in Part III.

---

<sup>1</sup>Contrary to big-bang theories, universes have no natural beginnings or endings as described in later chapters.

<sup>2</sup>Infinity is a mind-created concept, not a part of reality.

## *Movement I: Neo-Tech Physics*

### Rapid Communication Across Universes by using

#### Super-Inflation Gravity Units Called SIGUs

Reality can never be contradicted. Thus, the laws of nature and physics can never be violated. That means nothing can exceed the speed of light. So, how can near instant communication occur across distances that require light (travelling at 186,281 miles per second) millions or even billions of years to traverse? Even more, how can communication occur between universes from which not even light can escape? Conscious beings and only conscious beings can accomplish such near instant communication. How do they accomplish that communication without violating the laws of nature or physics?

Conscious beings harnessing the Super-Inflation nature of Gravity Units (SIGUs) can produce near instant, gravity-pulse communication not only across an entire universe but possibly between universes — all without violating physical laws, including the speed of light. How? By gravity pulses transmitted through big-bang-type inflations radiating from exploded Gravity Units.

How do gravity pulses communicate faster than the speed of light with nothing exceeding the speed of light? First, realize that the smallest units of existence, Gravity Units, and the largest unit of existence, the full expanding universe, are one and the same: They each contain the same mass and energy potentials. The units are just in different modes throughout time and space. Next, examine the so-called big-bang or hypothetical spacetime birth of our universe from a gravity unit: At  $10^{-42}$  of a second or Planck's time after its birth, the entire universe is  $10^{35}$  times *smaller* than a subatomic proton. Doubling every  $10^{-34}$  seconds or doubling  $10^{36}$  times at  $10^{-32}$  seconds

## *Boundless Prosperity*

from birth, the universe has grown to 12 centimeters across — about the size of a grapefruit. And then, doubling  $10^{50}$  times by somewhat over  $10^{-30}$  seconds from its hypothetical birth, the universe has exploded to the size of our solar system — all in that tiniest fraction of a second. ...In other words, during that instant in time, the universe has expanded trillions of times faster than the speed of light. Yet, nothing exceeds the speed of light. How can that occur?

The super-fast growth of the universe during its first moment in time can be explained by the Inflation Theory originated by Alan Guth of MIT in 1979. Such inflation involves the brief existence of “repulsive gravity” and the relative positions of spacetime coordinates in accord with Einstein’s general relativity. ...That super-fast inflation can also be understood, without complete accuracy, in more simple Newtonian terms: Consider two entities starting at the same point and moving apart near or at the speed of light. At the end of one year, those entities will be about two light years apart. Thus, they will have “communicated” from their respective points A and B at about twice the distance covered by the speed of light without exceeding the speed of light.

Now, consider breaking the geometry or symmetry of a universe-containing Gravity Unit or Geometry Unit, causing a spacetime birth. That occurrence begins the near instant conversion of the smallest unit of existence, the universe-containing Gravity Unit, into the largest unit of existence, the entire expanding universe. Incredibly, that new-born exploding Gravity Unit has the same mass/energy total of an entire universe fifteen billion years old. Consider what occurs in the tiniest fraction of the initial second during a big-bang birth: a near instantaneous unit-after-unit multiplication, perhaps initially with repulsive

*Movement I: Neo-Tech Physics*

gravity, into nearly the total number of entities ( $10^{86}$ ) that will exist in the mature universe billions of years old.<sup>1</sup>

Like the previous, simple example of two entities separating at nearly twice the speed of light, each of the rapidly multiplying, countless entities are also separating at or near the speed of light from all the previous and subsequent formed entities. That process multiplies distances of entity separation by trillions of times the speed of light without any individual entity exceeding the speed of light. In that way, the total range of expansion or “communication” announcing the big-bang birth occurs at trillions of times the speed of light without violating the laws of physics. (See pages 91-92 for another perspective.)

What if conscious beings can control how and when to break the symmetry of Gravity Units? With conscious beings controlling the symmetry breaking of Gravity Units, the efficiencies and power of universe-creating energy and communication multiply. How can that multiplication occur? The most obvious way is by aiming or lasing each spacetime birth in specific directions as energy waves or gravity pulses, rolling out in multidimensional geometries ...rather than allowing the gravity explosion to convert into the “usual” universe-making energy and matter radiating in three geometric directions. ...Also, such communication could possibly flash through hyperspace to other universes.<sup>2</sup>

---

<sup>1</sup>Each new universe exploded from a single Gravity Unit will then contain its own space-time dimensions filled with its own, new quantized geometries or Gravity Units each of which can in turn form a universe filled with Gravity Units. ...For this, as with certain other hypotheses in Neo-Tech Physics, no direct evidence as of yet exists.

<sup>2</sup>In water, the speed of light slows by about 23% to 142,600 miles/second. Thus, in water very high-energy, charged particles can exceed that slower speed of light to create a light-barrier shock wave producing Cerenkov radiation. Now, throughout existence, no total vacuum can exist in which to measure the ultimate speed of light.

(footnote continued on next page)

## *Boundless Prosperity*

### Business: The Power of the Universe

Competitive business is the eternal power of existence. It advances every level of society throughout the universe as described in Mark Hamilton's *Neo-Tech Cosmic Business Control*, 510 pages, Neo-Tech Publishing (1989) and in Eric Savage's *Neo-Tech Global Business Control*, 256 pages, Neo-Tech Worldwide (1992). Business is the natural mode of existence for conscious beings. What is business? Business is the *competitive production* and *voluntary exchange* of values among conscious beings. ...Conscious beings throughout the universe control nature through business.

Knowledge begets knowledge. Thus, knowledge is limitless — limitless power. Harnessing universal energy and communication through business represents one increment of productive achievement along the endless scale of knowledge throughout the Civilization of the Universe. Indeed, conscious beings exert business control over nature. Through the universal virtue of competitive business, advances in value production continue endlessly — beyond the imagination of conscious beings on Earth.

---

(footnote continued from previous page)

In our universe, the quantum vacuum state or the gravity-unit ether exists at a certain energy level. In a vacuum state at lower-energy levels, light could travel faster than 186,281 miles/second. Does that mean certain particles such as Gravity Units could travel faster than 186,281 miles per second through our universe and not exceed the speed of light travelling through lower energy-level vacuums? Is the Guth's "faster-than-light" big-bang expansion phase simply the speed of light traveling into a lower energy-state vacuum of meta space? Could such particles set up a shock wave that would break or tunnel through the metastable vacuum of this universe into a lower energy state, thus, annihilating at light speed our entire universe as we know it? Or, could lower vacuum states be a conscious-controlled, advanced source of energy and communication? ...What about tachyons? They are hypothetical particles that can never travel *slower* than the speed of light and *increase* in speed as they *lose* energy. Existence of tachyons is entirely speculative and highly unlikely.

### *Movement I: Neo-Tech Physics*

Yet, someday, in the eternal Civilization of the Universe, immortal descendents from Earth will routinely function along all levels of unimaginable knowledge and accomplishments.

How can conscious life be immortal — eternal? First, examine the nature of existence: Existence is axiomatic. Existence simply exists — eternally, without prior cause. No alternative is possible. For, existence cannot *not* exist. Thus, as part of existence, the evolution of consciousness is also eternal. Countless conscious societies, therefore, exist throughout the universes with endlessly higher levels of knowledge — with millions or billions of years more advanced societies than ours. Because of such vast and endless differences in knowledge, conscious beings at any specific level of civilization cannot imagine the knowledge or activities of say a thousand years, much less a million or a billion years, more advanced societies.

If communication among conscious beings throughout the universe delivers rational benefits, such communication would develop through competitive-business dynamics. But, probably no net benefits would accrue from communicating with less advanced civilizations. Likewise, communicating with much more highly advanced civilizations would probably yield no net benefits. For, conscious beings in the Civilization of the Universe would not benefit by jumping significantly beyond their own ongoing, step-by-step integrations in developing knowledge and values. Indeed, no matter from what level of knowledge, the *continuity* of experiences and integrations needed to create ever expanding prosperity is the root cause of happiness in any civilization.

Why are net benefits impossible from big-gap jumps into realms beyond current knowledge? For example, conscious beings cannot benefit from “million-year”

### *Boundless Prosperity*

advanced-knowledge jumps without going through the integrated steps to acquire that knowledge. Indeed, to benefit from advances in knowledge requires meeting the criterion for advancing prosperity. That criterion throughout all universes and all time is fully integrated honesty combined with productive effort. In other words, that criterion *is* Neo-Tech.

#### On Becoming Zon

Most conscious beings among Earth's anticivilization will encounter the fully integrated honesty of Neo-Tech at least once by the year 2000. That encounter will knock each person down. But, most people will jump right back up. Still enclosed in their mystical bubbles, most will bounce away...never examining what happened, never discovering eternal life and prosperity. Yet, a few will stay to examine Earth-evolved Neo-Tech. They will benefit enormously from applying its fully integrated honesty *within* Earth's anticivilization. ...And, a small number of those people will go beyond Neo-Tech by entering the Civilization of the Universe. As explained in Part III, they will become Zons. For them, the anticivilization will vanish into its nothingness as they experience the power of the universe — the power of Zon.

With the power of Zon, all things throughout the universe can become nonmystical conscious thoughts — *and nonmystical conscious thoughts (T1) can become all things (T2) throughout the universe.* ...As explained in Part III, from the equation  $T1 = T2k$  arises  $k$  as the universal constant of Zon. From the constant  $k$  flows the power of Zon.<sup>1</sup>

---

<sup>1</sup>The Zon constant  $k$  has not yet been determined. But,  $k$  would be the fifth and unifying universal constant: unifying the relativistic,

(footnote continued on next page)

### *Movement I: Neo-Tech Physics*

(footnote continued from previous page)

macroscopic universal constants of  $G$  (gravity) and  $c$  (velocity of light) with the quantum, submicroscopic universal constants of  $k$  (Boltzmann) and  $h$  (Planck). Perhaps  $k$  manifests itself in some sort of unifying ratio with the other four universal constants, such as  $k: Gc/kh$ . The Zon constant would relate energy, mass, gravity, and their velocities to the flow of *time* toward decreasing entropy, *not* toward increasing entropy. ...Universal constants, including the quantum cosmological constant, ultimately arise from a deep, compelling symmetry or geometry controlled by conscious beings. *The Zon constant fixes the values of all other constants.*

Except for consciousness, gravity is the weakest yet most pervasive force in nature. Indeed, gravity controls universal motion. But, the fifth force of nature — human consciousness — is the *grand-unifying* force controlling all existence. Conscious force is more subtle to specific measurement and mathematical quantification than gravity. Still, consciousness is the most noticeable force on planet Earth. Moreover, consciousness is the only force that can alter the otherwise predestined courses of the other four forces of nature: gravitational, electromagnetic, weak nuclear, strong nuclear. ...Consciousness is the force that unifies all forces and heals the seeming breaches of nature caused by quantum “uncertainties”.

As a law of nature expressed by the Heisenberg Uncertainty Principle, facts asserted as truth are never certain. But, *principles* contextually determined through integrated honesty are always certain. Thus, for example, one can have certainty about the Heisenberg Uncertainty *Principle* without paradox or contradiction: (1) Metaphysically one can be certain that any particle always has an exact position and momentum at any exact time. But, epistemologically one can be certain that exact position and momentum *cannot* be simultaneously measured...at least not directly. (2) Measurements can be validly done in Euclidean/Galilean/Newtonian coordinate systems or in noneuclidean/relativistic/quantum-mechanical systems, depending on the object measured and the accuracy desired. And finally, (3) the indeterminate and probabilistic nature of quantum mechanics does not negate the laws of identity, noncontradiction, or cause and effect. The decay of radioactive atoms, for example, are both indeterminate and probabilistic. But, each decay has an identifiable, noncontradictory cause. ...That means Heracleitus, Plato, and Kant are out; Parmenides, Aristotle, and Rand are in.

As a side note important later: Plato is the father of organized deception through “noble” lies — the father of purposely dishonest government and science. Aristotle not only is the father of logic, science, and biology, but is the father of *rational* metaphysics and epistemology. Plato subjugated conscious life to higher mystical powers. Aristotle exalted conscious life on Earth as the highest value. Portions of Aristotle’s ethics and politics, however, remained under Plato’s influence, thus, are fallacious. ...Philosophically, Plato and Kant are mankind’s villains, Aristotle and Rand are mankind’s heroes.

## Chapter 2

# Your Journey to *Zonpower*

What is Zonpower? To answer that question, you must first take a journey that leads to the center of weirdness. Then, you must go beyond, into the realm of weirder-than-weird. That journey will lead you into the weirdest realm of the entire universe. And that realm is right here on planet Earth in its bizarre, upside-down, anti-power civilization. You must go to that black-hole apex in order to go through it and then out into the advanced Civilization of the Universe — the civilization of honesty, prosperity, and happiness.

### Journey to the Weirdest Realm

Only from this anticivilization can you discover the realm of weirder-than-weird. Once there, you will find the key to Zonpower. Unlocking the door to all power and prosperity, you will escape the false journey that essentially everyone on Earth is traveling: As one example, consider the false search in today's sciences and religions, especially in astro/quantum/particle physics and the Vatican. That search is for a **Quantum/God Singularity** and the **Big Bang** — the fictional, wished-for birthplace of our forever evolving, plasmatic Universe.

World-class scientists have searched for that single point of creation. Yet, the notion of Singularity contradicts the laws of nature and physics, as do the mystical notions of perpetual motion, cold fusion, low-energy nanotechnology, along with various mystical interpretations of chaos and quantum mechanics. Many brilliant scientists

### *Movement I: Neo-Tech Physics*

are pursuing never ending illusions that demand ever more tax money, such as the twelve-billion-dollar, super collider (SSC)<sup>1</sup> in Texas. Such pursuits can generate ever more intriguing but eventually meaningless science and mathematics.

Singularity is rationalized to occur in an infinite<sup>2</sup> black hole collapsed to an undefinable, single-point entity filled with mathematical stratagems involving infinities. From such a single-point entity or Singularity, certain physicists assert that our universe and all existence was born. In turn, certain religionists enthusiastically point to Singularity as scientific proof of “God”. For, the creation of our universe from Singularity would require a “God”

---

<sup>1</sup>The SSC’s mission to find the Higgs boson is a valid quest, especially under brilliant Nobelists such as experimentalist Leon Lederman and theorist Murray Gell-Mann...but not under the dishonesties and inefficiencies of tax-funded science.

<sup>2</sup>“Infinite” is a useful mind-created concept that cannot exist in reality. Except for existence itself, which is eternal and has no finites or boundaries, “infinity” violates the law of identity. In accordance with reality, at any point one stops in traveling toward infinity, the entity is defined and finite, never infinite. For example, one’s mind knows that a curve can asymptotically approach a straight line forever. Yet, at any point on that curve, all becomes finite and definable about that curve and the straight line.

Now, consider how the notion of a single point can always be approached closer and closer, but can never be reached. For, like the notion of infinity, singularity does not and cannot exist beyond a mind-created notion. As an analogy, think again how a curve can asymptotically approach but never reach that straight line and become a straight line. Nothing in reality can justify a notion that such an ever approaching curve would suddenly contradict its nature — its never-ending course — by arbitrarily and inexplicably jumping over a quantum space to join, straighten out, and become a part of that never reachable straight line.

The laws of identity and noncontradiction always hold in reality. Those laws are eternally fundamental and axiomatic throughout existence. Moreover, existence is not in space or time. Rather, time and space are in existence. The universe is eternal, not infinite.

## *Your Journey to Zonpower*

mystically preexisting in nothingness and creating a universe out of nonreality. ...What an unnecessary, impotent notion.

Why resort to mysticisms, nonrealities, and nothingness to explain the creation of our universe? Why be stuck within such unreal and harmful limitations? Consider the seemingly infinite number of ordinary conscious beings wielding Zonpower throughout the rational civilizations existing among the universes. Most of those conscious beings have the power to create far beyond any imagined creations of a mystical “God”. And, unlike the miracles of a made-up “God”, conscious-being creations are real — accomplished naturally, within the laws of physics.

Each such conscious being, for example, has the power to create an endless number of universes from an endless number of universe-containing black holes existing at every spacetime point throughout eternity. Even so, most of those conscious beings have technologically and economically advanced so far that they have long ago in their forgotten histories abandoned the creation of universes as an inefficient, primitive activity.

### Vanish All “Gods”

With Zonpower, one captures powers far beyond any imagined powers of a “God” conjured up in Earth’s anticivilization. Every such “God” is created to demand sacrifice — sacrifice of the productive class to the parasite class. But, with Zonpower, one escapes the “God” trap by entering the Civilization of the Universe.

Blasphemy? No. For, rational Zonpower, not imagined Godpower, is real and good. Zonpower, not wishful thinking, delivers open-ended prosperity and happiness to conscious beings throughout the universe.

### *Movement I: Neo-Tech Physics*

Individual consciousness throughout the universes *is* the eternal, grand-unifying force of existence.

On planet Earth today, Albert Einstein represents the furthest advance in theoretical science and physics based entirely on a foundation of rationality and reality. Einstein avoided any arbitrary, quantum-mechanical retreats into fashionable nonrealities or Eastern mysticisms. With the recent discovery of Zonpower, Einstein arises anew. For science, physics, quantum mechanics, mathematics, and business can now advance in unison on Einstein's foundation of rationality and reality toward the promised land.

#### A Journey into the Black Hole

To discover Zonpower, you must first take a journey to the realm of weirder-than-weird.<sup>1</sup> This journey proceeds from Einstein's dual relativity viewpoints — first from the observer's viewpoint and then from the traveler's viewpoint:

#### THE OBSERVER

Through a special relativity telescope/microscope, you are observing a spaceship hurling toward a universe-containing black hole of such great mass that all matter will collapse seemingly forever.<sup>2</sup> You see the spaceship

---

<sup>1</sup>This metaphorical journey is contextually and descriptively fairly accurate. But out of necessity for nontechnical communication, some descriptions are not *precisely* accurate. Other descriptions await further advances in physics.

<sup>2</sup>Every black hole originates from less than infinite mass and energy. All black holes, therefore, will stop collapsing at some equilibrium point determined by its finite mass/energy: For example, stopping at the Chandrasekhar limit then at the Schwarzschild radius. That equilibrium point of finite size consists of various entities and energies that cannot by definition be a pure point of singularity. Instead, by nature, those entities and energies are simply new, valid, and real sets of physics definable by that particular condition for those entities, masses, energies, and finally gravity at a particular density or geometry.

## *Your Journey to Zonpower*

cross the event horizon to be inescapably captured by the enormous, always increasing gravitational pull of that black hole. That overwhelming gravity continually accelerates the spaceship's plunge toward the center point with ever increasing speeds — speeds always approaching but never reaching the speed of light: 186,281 miles per second.

Observable only through your relativity telescope/microscope, the collapsing, mega-mass black hole itself is now submicroscopic. And that black hole continues to collapse at ever increasing speeds. With fuzzy thinking, you rationalize that the infinitesimally tiny black hole still collapsing ever faster, approaching the speed of light, should in the next instant crunch into one entity at a single-point center. Your fuzzy thinking continues: All entities and forces would then become Singularity — a unified, single-point entity or force describable only in terms of unreal infinities.

Yet, no such thing happens as you continue observing through your relativity telescope/microscope: The spaceship and all surrounding existence keeps hurling toward the center at ever increasing speeds with ever decreasing distances, but without ever reaching the center. How can that be?

By continuing to observe the spaceship, you discover the answer through the laws of physics and Einstein's Special/General Relativity: As any object approaches the speed of light, its mass density increases *toward* infinity and its size shrinks *toward* zero length from the observer's viewpoint. Accelerating toward the speed of light, that spaceship appears to you, the outside observer, to move forward essentially as fast as that same spaceship is shrinking backward. Also, time aboard the spaceship

### *Movement I: Neo-Tech Physics*

appears to slow toward zero. Thus, as with all the other entities of that black hole, the shrinking spaceship keeps approaching the black-hole center at ever higher velocities, but with ever slowing time, never reaching that center.

At some approaching equilibrium, the collapse will stop accelerating as determined by the laws of physics and the finite mass/energy/gravity geometry of the black-hole center. At that moment, the spaceship and all other surrounding entities of existence captured by the black hole will stop shrinking. All existence will then lock together in a black hole of finite size and specific nature — a nature or physics characteristic to its particular gravity or geometry. Moreover, that or any physics will always be in accord with reality. Thus, such a finite geometry of locked entities can, by definition and nature, never be a single point of mass or energy...or of Singularity. Instead, all that existence will be an energy/entity unit of gravity or geometry...not a single-point.

Without the mind-blocking, dead-end concept called Singularity, a new question and viewpoint arise: What or who could break a black-hole equilibrium of locked-together symmetries, entities, and energies? The answer, as described in later chapters, is that conscious people can break universe-containing black-hole symmetries to create universes and encoded cosmos systems observable today.

#### THE TRAVELER

Now, let us experience the same journey as a traveler on that spaceship in quest of Singularity. First, you would have to somehow acquire such a spaceship from some advanced civilization. For, if you were capable of building that spaceship, you would also have the knowledge to realize Singularity is a contradiction of reality and cannot

### *Your Journey to Zonpower*

exist. Thus, any such quest would be a fool's journey, forever wasting your life. Indeed, when that universe-containing black-hole equilibrium were finally reached, you would be locked together with all entities and energies, entombed apparently forever in that black hole.

Nevertheless, in that spaceship, you are now accelerating toward a seemingly infinite-mass black hole that will collapse almost forever toward its center. Crossing the event horizon, you see the center of the black hole. You fear an imminent crash into that center. But, soon, you realize something entirely different is happening. On looking outside the spaceship, time seems to pass so slowly and then ever slower. To travel the most minute distance seems to take forever. Every tiny incremental approach toward that black-hole center seems to take ever longer as time passes ever slower.

Soon you seem to be standing still with the black-hole center never again appearing to get closer. Yet, the spaceship's instruments show you are traveling at almost the speed of light and continually accelerating toward that center. You realize that you are experiencing not only Einstein's relativity in time and space, you are also experiencing relativity in gravity: Now, even the increases in gravity seem to have stopped. In fact, not even the quantized effects of gravity can escape that universe-mass black hole. ...You seem to be forever frozen in time, space, and gravity.

Finally, you the space traveler realize the ultimate fool's journey of boredom in which you have embarked and are forever trapped. You lose all that conscious life and valid knowledge have to offer. Your fool's journey offers only an endlessly changing physics, energy, and particles that at first seem rapid, interesting, important, and leading to new knowledge for answering questions. But

### *Movement I: Neo-Tech Physics*

now, your almost infinitely slow journey is leading to nothing new — nothing that can build new knowledge or answer questions in reality. You can only observe endlessly slower changing forms<sup>1</sup> of mass/energy that are forever predictable as a function of existence and its gravitational fields, geometries, and dimensions.

Yet, the moment you awaken from your unreal physics-fiction dream is the moment you recognize what an endless, inescapable fool's journey you have traveled and are now stuck. Then, the door to escape opens. Realizing existence is never born or created, it simply exists eternally, your mind is finally free. Your entire thinking and viewpoint change. You realize existence, *not* consciousness, is primary.<sup>2</sup> You can now gain valid, new knowledge — Zonpower knowledge — that will show you how to escape that meaningless pursuit of a nonexistent grail: the birthplace of existence. You realize existence has no birthplace. You realize conscious beings have always controlled eternal existence through Zonpower.

Indeed, Zonpower brings you into the all-powerful Civilization of the Universe. With Zonpower, you control existence and, thus, can break out of any black hole.<sup>3</sup>

---

<sup>1</sup>Changing from a black hole to a naked black hole from which nothing, not even gravity, can escape...and finally changing into the geometry of a Gravity Unit.

<sup>2</sup>Aristotle is the father of the philosophically correct *primacy-of-existence* concept — a concept fully validated by Rand and Peikoff in the late 20th century. Plato is the father of the philosophically false *primacy-of-consciousness* concept — a concept disastrously advanced by Augustine, Hobbes, Descartes, Hume, Kant, and Hegel. ...Totalitarian-trending governments and their destructive politicians, armed bureaucrats, and parasitical elites require a dishonest, primary-of-consciousness philosophy to advance. *Zonpower in cyberspace vanishes Plato's philosophy, irrational acts, and government evils.*

<sup>3</sup>With conscious beings, rotating black holes can actually become shortcuts through space and time.

# Chapter 3

## Seven Waves

to the

### Civilization of the Universe

#### WAVE ONE

##### The Journey into a Black-Hole Civilization

\* A spaceship travels into a universe-containing black hole: That spaceship can never reach Singularity, all in accord with the laws of nature as expressed by (1) Einstein's general relativity, by (2) *full-context* quantum/particle physics, or by (3) multidimensional superstring or duality string theories.

\* Singularity and the big-bang creation of existence is a mystical notion requiring an imagined "God". Thus, the astute Vatican and its Pope, as early as the 1950s, seized out-of-context quantum physics as the long sought-after-link of science to religion "proving" the existence of their mystical "God".

\* The fundamental fact of existence is *existence exists*. That means existence is eternal without prior causes. Existence includes the full evolvment of each new universe: from subatomic gravity units, quarks, electrons to the elements and compounds...from land, water, life, conscious beings, buildings, computers to conscious-created civilizations...and finally to conscious-controlled universes — controlled from both above and below. Thus, life and consciousness — like geometry, matter, and energy — have existed throughout eternity. Indeed, conscious beings like us, not an imagined "God", have eternally controlled nature and existence. ...Consciousness within each human being *is* the controlling force of existence.

*Movement I: Neo-Tech Physics*

WAVE TWO

Discovering the Civilization of the Universe

\* Consider the very few honest philosophers who have lived on Earth: Parmenides, Aristotle, Thomas Aquinas (“variance with reason is evil”), Baruch Spinoza, Adam Smith (economist), John Locke, Ayn Rand, Leonard Peikoff. Consider their struggle against the irrationality of an anticivilization. They all sensed increasing frustration at their inevitable failures because they too were an integrated part of irrationality — of anticivilization. They never knew how to leave or even knew that leaving an anticivilization was possible. They never considered themselves being able to create and then enter the Civilization of the Universe. ...They too were locked in a fool’s journey within Earth’s black-hole anticivilization.

\* Not until mystical, wishful-thinking notions, such as a Quantum/God Singularity, are cut away and discarded can physicists, mathematicians, and astronomers once again move forward in generating major new knowledge. As new-age mysticisms multiply, all fields of knowledge shrink toward darkness. But, as Neo-Tech starts vanishing such mysticisms, those declines in physics, mathematics, astronomy, medicine, law, education, and philosophy will reverse. The resulting forward movement will bring a golden age of knowledge. From that new knowledge and prosperity, we shall learn to live forever with ever increasing wealth and happiness. We shall be in the Civilization of the Universe.

WAVE THREE

Zon Easily Outdoing “God’s” Supreme Feat

\* A century ago, no religious huckster could even imagine their mystical “God” could create a nuclear-power

## Seven Waves

reactor or a computer. Yet, conscious beings easily do that today.

\* Who would be the winner in any Zon-versus-“God” contest? All conscious beings have the capacity within the laws of nature and physics to outdo the greatest imaginable feat of that mystical “God” — the creation of our universe. Indeed, the creation of universes by conscious-controlled, Guth-type inflations of Gravity Units is elementary child’s play long-ago left behind by the more advanced Zons.

\* Unchain Jesus<sup>1</sup>: He was a hero of Zon, not “God”.

\* Cut away and vanish the nothingness trap of mysticism, such as Quantum/God Singularity. Then what happens? An entirely different view, thinking, experiments, and physics unfold:

<sup>1</sup>Not the unreal, dead Jesus of establishment Christianity. Not the chained, captive Jesus manipulated by parasitical “authorities” and vested interests since 400 AD. But, the real, ever-living Israelite Jesus — the free spirit of eternal prosperity and happiness.

The parasitical-elite class with its subjective laws and ego “justice” attacked, jailed, and finally killed Jesus. Why? For his trying to bring the prosperous Civilization of the Universe described in Movement III to the harmful anticivilization described in Movement II. ...The professional value destroyers of the Roman Empire convicted and crucified Jesus solely to protect their ego agendas and harmful livelihoods.

Brief, erratic contacts with the Civilization of the Universe described in Movement III were perhaps experienced by Moses, Confucius, Socrates, Jesus, Bruno, Galileo, Spinoza, Newton, Brigham

(footnote continued on next page)

### *Movement I: Neo-Tech Physics*

\* A century ago, any thought of human beings cracking the atom to convert mass into energy was inconceivable. Today, nuclear energy is routine. Likewise, today, any thought of human beings cracking super-dense black holes or Gravity Units (GUs) into new galaxies and universes is inconceivable. Yet, once free of mystical notions such as Singularity and the big-bang creation of spacetime, the cracking of black-hole symmetries will become understood. Then, universe-making energy can be harnessed by conscious beings breaking the symmetry of universe-containing Gravity Units — all consistent with the laws of physics. ...That process, in turn, will spin out the unlimited riches available from the conscious-controlled unleashing of matter and energy from those Gravity Units.

#### WAVE FOUR

##### Surpassing Einstein

\* A universe-containing Gravity Unit (UGU<sup>1</sup>) is equivalent to all the mass and energy of a universe spun into a submicroscopic geometry of wound-up gravity or antimotion order at zero entropy — the pure, quantized geometry of gravity in which time and space do not exist. Advanced conscious beings create countless universes from such hidden quantized Gravity Units. How? By

---

(footnote continued from previous page)

Young, Einstein. But, today, a consistent, nonstop journey from Earth to the Civilization of the Universe has begun. It began in 1976 with the publication of the *Neo-Tech Reference Encyclopedia*.

The future belongs to fully integrated honesty — to reason, rationality, Neo-Tech, and the Civilization of the Universe.

<sup>1</sup>Universe containing Gravity Units (UGUs) *are* existence, thus, have existed eternally. By contrast, universe-containing black holes (Chapter 2) form whenever an entire universe collapses into a black hole.

## Seven Waves

breaking symmetries to unwind the endless UGUs into universes of matter and energy...or perhaps into just gravity pulses for communication. Why do conscious beings create universes? To utilize nature's ultimate energy and communication source in advancing their well beings. ...That conversion of UGUs into endless riches and universes by conscious beings is expressed by the equation:

$$\text{UGU energy}/c^2 \xleftrightarrow{\text{Eq}} \text{UGU mass} \xrightarrow{\left[ \begin{smallmatrix} \text{broken} \\ \text{symmetry} \end{smallmatrix} \right]} \text{Energy+Mass+Time}$$

\* The UGU state is near pure gravity in an existence field. UGUs are at once *all* energy and *all* mass. The quantized Gravity Unit is the basic unit of existence — the immutable source of all life and riches. Thus, all expanding values and riches rise from that single unit (*not* a single point) — the quantized GU. Additionally, GUs are the energy and communication means among the controlling force of existence — goal-directed conscious life.

\* How does one prove conscious life is the only nongeometrically structured force of nature — the fifth and controlling force of the universe? By discovering anomalies in the universe that are unmistakably obvious as conscious creations — creations that could never be produced or configured by the other four universal forces — the geometrically structured forces of gravity, electromagnetism, weak nuclear forces, and strong nuclear forces. ...Consider one observing a planet in a distant solar system. Did conscious life ever exist there? What if that observer spotted a land-rover vehicle on that planet? That land-rover vehicle would be unmistakable proof of conscious existence. For, no geometric force of nature could produce or configure a land-rover vehicle. Now, extrapolate that example to anomaly configurations in the universe. Are those anomalies a part of a nongeometric,

## *Movement I: Neo-Tech Physics*

consciously encoded cosmos system? Such anomalies will be resolved only by plugging in the purposeful, unifying force of conscious life into theoretical and mathematical models of our entire universe down to subatomic phenomena. ...Is existence itself encoded by conscious control?

\* At every level, from distant quasars to subatomic quarks, from astronomy to quantum physics, certain anomalies will be resolved as purposeful, life-enhancing conscious actions. Within that resolution exists the proof that nongeometrically structured conscious life *is* the fifth and controlling force/dimension of existence.

\* The conscious harnessing of Super-Inflation Gravity Units (SIGUs) allows near instant, gravity-pulse communication not only across our entire universe but possibly between universes — all without violating physical laws, including the speed of light. How? By rolling multidimensional geometries into lased gravity pulses transmitted via Guth-type inflations of Gravity Units.<sup>1</sup>

### WAVE FIVE

#### From Impossible to Succeed to Impossible to Fail

\* Civilizations and anticivilizations are conscious-

---

<sup>1</sup>No single entity or particle can travel faster than the speed of light. But, quantum fluxes can provide “instantaneous” or “superluminal” travel of a particle such as the Bohr-orbit quantum jump of an electron. What happens is a quantum flux produces a physics-permitted, positron-and-electron pair in a vacuum in a different energy level or orbit. The space/energy difference between the two energy levels is the electron-produced wavelength. The positron then annihilates the lower orbit electron leaving the new electron in a different orbit, giving the appearance of an instantaneous jump between orbits when in reality two separate electrons are involved.

Similar rationally explicable phenomena occur with faster-than-light, “big-bang” expansions or quantum fluxes of Gravity Units into universes. ...No mysticism or conscious-created reality exists in physics or reality, from cosmological relativity to quantum mechanics.

## *Seven Waves*

created, just as are land-rover vehicles, airplanes, and television sets. None exist in nature alone. None are created by the other forces of nature without conscious beings.

\* The Civilization of the Universe is created by conscious beings objectively integrating reality. But an anticivilization is conjured up by humanoids subjectively disintegrating reality.

\* In an anticivilization, endless volumes of philosophy arise in order to rationalize or counter the endless contradictions of reality and rationality. The Civilization of the Universe **is civilization**. *For, civilization is the integration of reason and objective reality.* In such a civilization, philosophy simplifies to a few words and then disappears as self-evident.

\* Civilization vanishes any anticivilization on contact — somewhat analogous to matter vanishing antimatter on contact. Both anticivilization and antimatter are anti *by nature*. Therefore, their natures can never be changed. But, they can be annihilated, vanished, or puffed away by actual matter and the actual Civilization of the Universe.

\* Throughout the universe, the position of anyone or any civilization on the scale of knowledge makes no difference. Only the process of advancing unimpeded on that never ending scale of knowledge delivers prosperity and happiness to conscious beings.

\* The Civilization of the Universe delivers far beyond any mystic's dream of a no-effort paradise. With Zonpower, one can solve life's problems to live eternally in ever expanding knowledge, prosperity, and happiness. For, the Civilization of the Universe is based on rational efforts integrated with reality — on disciplined thoughts, goal-directed actions, and iron-grip controls — not on lazy rationalizations, wishful thinkings, or sloppy mysticisms.

## *Movement I: Neo-Tech Physics*

\* In any civilization, the *only* legitimate or beneficial function of government is to **protect** individual property rights. The *only* legitimate use of force is self-defense in protecting those rights. By contrast, criminal-controlled governments of anticivilizations depend on political-agenda laws, ego “justice”, initiatory force, threats, coercion, fake compassion, and fraud to survive. They survive by draining value producers and **violating** property rights.

\* How can one escape parasitical elites while trapped in their anticivilization? The trap is the attempt to reform their anticivilization, which cannot be done. The key is Zonpower. With Zonpower, one can cut away and vanish the anticivilization. Consider the following: (1) Zonpower is the tool for building unlimited prosperity available to every conscious being, (2) Zonpower is Neo-Tech applied from the Civilization of the Universe, (3) Zon is anyone who is applying Neo-Tech from the Civilization of the Universe.

\* In an anticivilization, long-range successes are impossible. In the Civilization of the Universe, long-range failures are impossible.

### WAVE SIX

#### The Source of Eternal Wealth

\* Technically, gravitational “forces” do not exist. As Einstein discovered in surpassing Newton, gravity is the relative interaction among the geometries of mass, energy, space, and time.<sup>1</sup> Similarly, universal consciousness as promoted by certain physicists, Eastern religions, and pantheism does not exist. Rather, universal consciousness

---

<sup>1</sup>Somewhat analogous to two-dimensional flatlanders feeling the tugs of geometric variances as “gravitational forces” when they traverse, for example, a crumpled sheet of paper.

## *Seven Waves*

as the eternal interaction between individual conscious beings and existence is what dominates nature.

\* As Einsteinian relativity overtook Newtonian gravity, astronomers and physicists went about empirically proving relativity. Likewise, as the Civilization of the Universe overtakes today's anticivilization, astronomers and physicists will go about empirically proving Zonpower: the control of the universe by conscious beings. ...Einstein's discredited cosmological constant will rise anew from Gravity Units containing the hidden Zon constant that brings eternal wealth and happiness to the universe.

### WAVE SEVEN

The Product from Zon — Let There be Light!

\* Civilizations are created by conscious beings applying the eternal principles of nature to life. Thus, civilizations can be created by billions of conscious beings or by a single conscious being. Moreover, as a conscious creation, civilizations can be created and expressed in writing — in a document. Once a Civilization of the Universe is created here on Earth, anyone can experience that civilization. And, once one experiences that civilization, he or she captures the power of Zon.

The ancients saw power in the gods among the stars. The golden-age Greeks brought power to man on Earth. Today, Zonpower brings the Civilization of the Universe to Earth. ...Zonpower gives conscious people power over existence.

\* On capturing that wealth and power among the Civilization of the Universe, one can never again look back or waste a thought on the boring irrationality of today's anticivilization — today's insane civilization ruled by dishonest parasites who can only drain others and harm society.

*Movement I: Neo-Tech Physics*

\* Thus, the first-and-final product from Zon is the *Civilization of the Universe*. As explained in Movement III, once one receives that ultimate product, he or she becomes a citizen of the universe. With the resulting Zonpower, that person puffs away the anticivilization to gain eternal wealth, romantic love, and exciting happiness.

*Science, Physics, and Mathematics  
merge into*

*Conscious-Controlled Cyberspace*

Francis Bacon (1562-1626) the father of the Scientific Method developed inductive reasoning and formulated perhaps the most important maxim of Western thought: “Nature, to be commanded, must be obeyed.” To be commanded, nature must first be understood. Thus, “knowledge is power”. ...That power resides in conscious-controlled cyberspace.

Galileo Galilei (1564-1642) the father of modern science identified and demonstrated that mathematics was required for the development of physics — its theories and laws. Mathematics as the key to understanding nature was also demonstrated by Johannes Kepler (1571-1630) in his discoveries of algebraic geometries that codified the elliptical orbits and area sweeps of planetary motions.

The Zon Institute is seeking to develop the mathematical descriptions and field formulations of conscious-controlled physics. All universal constants and the laws of physics are formulated through the conscious unfurling of Gravity Units. Publishable contributions providing such mathematical descriptions may be submitted to John Flint, The Zon Association, P. O. Box 60752, Boulder City, NV 89006.

# Chapter 4

## Zon's Force Field

### Note to General Readers

Understanding the scientific technicalities of the previous chapters and the next four chapters with their footnotes is not necessary for understanding and fully using Zonpower. Read those chapters for what you can easily understand. Do not worry about the rest.

By understanding what existence *really* is, you gain control over impediments blocking your life. Without those impediments, you can foretell the future to gain limitless riches.

Indeed, you can get incredibly rich by controlling the force fields of existence. But first you must know what existence really is through Neo-Tech physics. Existence is axiomatic and eternal. For, existence simply exists with no prior causes. Existence is a natural, open-ended plasma of force fields<sup>1</sup> eternally evolving with no beginning or end. Neo-Tech physics demonstrates how human-like consciousness is not only an integral part of existence, but is the eternal controller of its geometries, fields, and particles. ...Yet, what is the actual nature of existence?

Most existence throughout the universe exists as an open-ended electroplasma, always evolving through its interacting matter (M) and energy (E) fields or modes. Those two fields of existence eternally interchange in a

---

<sup>1</sup>Fields and forces are the result of noneuclidean geometries and symmetries in space. Thus, there are no unaccounted, spooky "actions at a distance". ...Superstring theory, which would involve the geometries and mathematics of Gravity Units, consist of sixteen dimensions, or, in actuality, ten dimensions because six dimensions are redundant. Those ten dimensions can, in turn, split into a rolled-up six dimensions in which time, space, motion, and entropy do not exist — and the unrolled four dimensions of our current observable universe in which time, space, motion, and entropy do exist.

### *Movement I: Neo-Tech Physics*

relationship expressed by Einstein as  $M=E/c^2$  (from  $E=mc^2$ ), with  $c$  being the universal constant representing the velocity of light.

Existence cannot *not* exist. Moreover, no vacuum void of existence is possible. “Vacuums” of the *matter* field can exist as in outer space, in vacuumed-pumped containers, and in areas between electrons. But, all those volumes are filled with the unmovable, frictionless ether or existence field — a uniform, continuous field of existence.<sup>1</sup>

Throughout eternity, a massless field uniformly occupies every spacetime point of existence. This field of existence behaves as an ether matrix with stationary wave, vibration, or string properties. Within this field matrix, both energy and matter geometries interact to form physical existence, always behaving in dynamic combinations of one mode interacting with the other. Certain motions of the matter field, for example, interact at the

---

<sup>1</sup>An all-pervasive existence field of mass and energy modes is somewhat analogous to a combination of (1) Dirac’s ocean in which exists an endless field of “electrons” or energy fluctuations at all points throughout space and (2) Faraday’s nonmatter, stationary lines or fields of force. ...All known energy modes can pressure wave through the energy/matter ratios of outer space. Most modes are absorbed or changed at the energy/matter ratios either in Earth’s gaseous atmosphere or in the liquids and solids of Earth itself. By contrast, almost all neutrino wave pressures can pass through the electron/nuclear fields of thick solid masses, even through the entire planet Earth without mode change.

This resurrection of an *ether*, **not as a matter or energy field**, but as a fixed existence field, reconciles Newton’s classical laws and Einstein’s relativity with quantum mechanics. Such a reconciliation arises from a universal Zon constant,  $k$ , which, in turn, arises from conscious control of the existence-field ether manifested at every spacetime point of existence. The resulting causal control of existence by eternal conscious beings is (1) universal, (2) fixed, (3) unmovable, and (4) independent of any frame of reference or method of observation.

## *Zon's Force Field*

quantum level with the energy field. That interaction produces irreducible packets of quantized energies or geometric structures. Those irreducible quanta, such as photons, send relief-seeking signals or perturbations into the continuous existence field radiating throughout eternity.

### Conscious Control of Existence Fields

During its creation, each new energy quantum slips smoothly and continuously from its matter field into the fixed existence field. Like water flowing from a dripping faucet, each quantum is pinched off into a minimum-energy wave packet. Simultaneously, from the continuous energy flow, a new quantum starts forming. Thus, continuous, smooth-flowing energy forms discrete photons. In turn, those photons or pinched-off wave packets of minimum *energy matter* create field disturbances or nonequilibrium pressures<sup>1</sup> signalling themselves in all directions throughout the existence field. Such signals generally travel near or at the speed of light.

Eventually, each point line of disturbance or pressure signal is relieved by a receptor that absorbs such signals. In turn, that disturbance absorption converts back into pinched-off packets of minimum *matter energy* — chemical, potential, or kinetic. In other words, a receptor relieves signal pressures by locally absorbing quanta equivalent to the quanta from the originating source. Each absorbed quantum is then converted back into the

---

<sup>1</sup>Not a pushing pressure, but a nonequilibrium pressure or disturbance signal seeking equilibrium. What is detected only *represents* what is transmitted. ...A pressure intruding into the existence field causes that field to curve around the intrusion which, in turn, traces the curved paths of gravity. The interactive relationships between mass, energy, fields, curved space, and gravity require an ether of existence fixed throughout spacetime.

## *Movement I: Neo-Tech Physics*

equivalent of its original mode. Such exchanges of modes can be detected as a wave/particle in the energy field or a particle/wave in the matter field or a combination, depending on how and where that mode exchange is emitted, absorbed, and measured.<sup>1</sup>

Those field or mode exchanges occur, for example, when stars pour *nature-controlled*, gravity-fusion energy into its surrounding electrons. Those energized electrons, in turn, pour photons into the existence field. Those photons cause disturbances that simulate waves ranging from radio waves to gamma waves. Those simulated waves radiate toward receptors located at the end of all point lines throughout existence — such as a lens of a telescope in another galaxy. That receptor conserves existence by withdrawing or absorbing equivalent amounts of pressure-alleviating photons to neutralize the disturbances from the originating source.

Similarly, a hydro, fossil-fuel, or fusion power plant on Earth pours *human-controlled*, power-plant energy into, for example, a television transmitter. That energized transmitter, in turn, pours its *human-controlled* photons into

---

<sup>1</sup>In measurements, the distinction between metaphysical and epistemological certainties must be discerned, especially in quantum mechanics: No *metaphysical* uncertainties exist in physical nature. Only *epistemological* uncertainties exist.\* Probability statistics are used in the absence of concrete knowledge. The de Broglie/Bohm's pilot-wave theories help eliminate the mystical misinterpretations of quantum mechanics arising from the 1926 Copenhagen Interpretation. ...Pilot waves are the fingerprint disturbances guiding moving particles.

\*Consider the following epistemological uncertainty: The ratio of a circle's circumference to its diameter is  $\pi$  or 3.14159..., a number that continues indefinitely without ever repeating. Thus, the use of  $\pi$  in calculations, such as the area of a circle  $A=\pi r^2$ , can never yield an exact or certain answer. For the answer always depends on how many decimals one extends  $\pi$  in calculating that area. Yet, an exact area exists, it just cannot be calculated by using  $\pi$  or any method of diminishing triangulation.

### *Zon's Force Field*

the existence-field ether. Such an action creates radiating lines of disturbances that are equilibrated by absorption of photons into the matter field of, for example, a television receiver. The same energy/matter mode equilibrations can be traced from that television set to the retina of a human eye, then to a conscious brain, and finally to volitional physical actions that both alter and control the course of nature.

Discrete quanta or particles move at high velocities approaching the speed of light mainly in (1) expansions or contractions of the universe, in (2) certain nuclear reactions or radioactive decays causing symmetry breakings or hidings, and in (3) conscious-controlled actions such as particle accelerations. By contrast, the ordinary transmission of light, electromagnetism, or quantum energy across space is not a result of any significant particle movement. But rather such linear or curved transmissions are simply vibrating, resonating, or wave-like disturbances in spacetime geometries propagating near or at the speed of light through the existence field. Thus, discrete energy quantum and matter quantum do not themselves travel across space. Instead, each creates a disturbance pressure that radiates wave like along the stationary point lines of existence. That wave-like disturbance is eventually relieved, equilibrated, or absorbed by receptors at the end of each point line of existence.

Consider the above description of *locally* creating and relieving energy pressures by emitters and receptors in the stationary existence-field ether. Now, consider the popular notion that almost every particle ever created or released physically races across space — often across millions or billions of light years in space. That notion seems to violate some sort of “least-action” principle. Such an

### *Movement I: Neo-Tech Physics*

action-inefficient notion of endlessly traveling quanta seems as quaint as the notion of a geocentric universe in which all inertial matter, planets, and stars daily race around planet Earth.

Indeed, both matter and energy interact locally, not across space. Light, for example, does not literally propagate across time and space. But, rather, light locally manifests a disturbance that spreads wave like throughout the existence-field ether until absorbed or equilibrated by a receptor.<sup>1</sup>

#### Conscious Control of Existence

The above example of an energy-releasing star can be “deterministically” calculated from the “immutable” cause-and-effect of existence *without* conscious influences. But, the above example of an energy-releasing television transmitter is the volitional dynamics of existence being integrated, controlled, and forever altered by freewill human consciousness. Thus, as revealed by Neo-Tech physics, all existence is ultimately controlled and evolved through volitional human consciousness.

Unknown to the busily self-serving Establishment, the

---

<sup>1</sup>Then what really is the “speed of light”,  $c$ ? First, consider atomic fission or fusion in which a given mass is converted to energy as  $mc^2=E$ . Now, by contrast, the “speed of light”,  $c$ , is the velocity at which a given energy is converted to mass as  $E/c^2=m$ . Yet, light itself is the opposite — it has no rest mass. So where is the connection of light to the velocity,  $c$ ? There is none. The “speed of light”,  $c$ , is not the speed of light at all, but rather  $c$  is the velocity relationships of field disturbances, which all have a speed limit of 186,281 miles per second in a particular vacuum state.

Incidentally, traveling near or at the velocity of light, energy fields bend in gravitational fields. The quasi mass generated by high-velocity, photonically disturbed existence fields is what bends in gravitational fields.

### *Zon's Force Field*

nature of existence and its dynamics of matter and energy are today being increasingly understood and methodically verified. That verification process will lead to the corollary verification that *human consciousness* is the eternal integrator and controller of existence. ...Human consciousness ultimately controls the relationships and geometries of the other existence modes — matter and energy along with space and time. The human-consciousness mode *is* the purposeful, unmoved mover of existence.

#### Zonpower Commands the Future

The scientific verification that any individual conscious being can control existence will vanish Earth's irrational anticivilization. As Earth's anticivilization vanishes, the rational Civilization of the Universe will embrace our world. ...With Zonpower, one can foretell and command the future by controlling the existence field that reaches into the future — into the Civilization of the Universe.

The age of Zon means controlling the universal information field *not* through Earthbound computers, but through Zonpower: the foretelling knowledge of Neo-Tech physics — the certainty used to gain limitless excitement, power, and riches...*eternally*.

# Chapter 5

## The Physics Behind Zonpower

*Zonpower* is a communiqué from the Civilization of the Universe. When you carefully read the *entire* communiqué, an epiphany will occur. You will, for the first time in your life, know how to control all that affects you. Nothing negative or harmful in the anticivilization will control you again. You will gain majestic control over your mind, body, and all events involving your prosperity, happiness, and well-being. ...You will gain Zonpower from which you will capture the power and riches available from the Civilization of the Universe.

Every owner of *Zonpower* must carefully read this communiqué in its entirety at least once, perhaps twice or more, in order to reach into an ecstatic future...into the Civilization of the Universe to gain its power and riches. At the same time, you will toss the yoke of today's stagnant anticivilization. Indeed, *Zonpower* delivers a stunning new power to benefit from every event that touches your life.

### Scientific Proofs

The final proof of the Civilization of the Universe lies in the foretelling powers of Zonpower that yield limitless riches, even to those trapped in this anticivilization. But to vanish this anticivilization by having everyone on Earth move into the Civilization of the Universe requires scientific proofs embedded in mathematics. Those proofs are today evolving. One such proof will evolve from answering the fundamental question: What is existence?

### *Movement I: Neo-Tech Physics*

The answer will arise by first answering another question: What is the relationship of consciousness to mass and energy? That answer requires understanding the relationship of inertial or gravitational mass to a massless universal ether — a fixed matrix of existence. Then, one can discover the relationships among mass, energy, and consciousness itself. ...How are (1) mass as “weight” and (2) energy as “weightlessness” related to (3) consciousness-controlled existence? Why do each of those three existence modes require a universal existence field? ...Below is the simplest approach to answering those questions:

#### If Mass is Not Intrinsic, What is Weight?

Aristotle postulated things had weight because they had tendencies to be heavy or light. But that postulate does nothing to really explain weight. Newton explained weight through the force of gravity. On careful thought, however, gravitational force does nothing more to explain weight than Aristotle’s tendencies. Additionally, Einstein’s general relativity demonstrates that gravity does not exist as a force. But rather mass curves space by displacing the space surrounding that mass. Thus, gravity is simply mass moving along spacetime curves — along natural paths of least action.

The greater the mass, the more it bends or curves space toward itself by displacement. Therefore, the more a unit of mass curves space toward itself the greater will be its inertia in falling toward another unit of mass with space likewise curved toward its own mass. ...Mass falling through space curved toward another mass gives the effect of gravitational attraction or negative energy striving toward nonmotion.

Now, through Einstein’s relativity, one can approach

### *The Physics Behind Zonpower*

an explanation of what weight really is. But, on still closer examination, even Einstein fails to provide a complete answer. What is missing? The existence field is missing — the ether that Einstein dismissed. ...Mass is *not* intrinsic to matter. Thus, an existence-field ether is required to explain what weight really is.

Why does Einstein's General Relativity fail to explain weight without a fixed field of existence? Take two cannonballs of identical size, one made of solid iron, the other of solid aluminum. Both fall and accelerate in a gravitational field at the same rate. Why does the iron ball weigh about twice that of the aluminum ball of the same size? Einstein's general relativity explains that space curves toward the center of mass in proportion to that mass. But, if a non-ether space surrounding the equal-sized cannonballs is being "displaced" and curved, is that curvature equal for equal-volume cannonballs? Is the weight for identical-sized iron and aluminum cannonballs identical? Of course not. ...What is wrong? Nothing.<sup>1</sup>

One must first strip away volume/particle/mass/energy ideas such as the mass of a quark or the energy of a photon. For, gravity and weight can be understood only in terms of interacting geometries within a fixed existence field *beneath* all mass and energy quanta...beneath each cannonball, quark, electron, photon.

The key concept is this: In order to have weight or gravity, one must have a fixed ether field of weightless existence that is *uniformly and equally present everywhere* from the spaces between galaxies and above, down to the spaces between quarks and below, down to the final symmetry of the ether-hidden Gravity Unit.

---

<sup>1</sup>Volume, of course, does not explain weight or General Relativity. And, of course, Einstein's General Relativity is correct. Volume is simply used as an analogy to dig beneath volume/mass/energy to find the gravity geometries needed to explain the origins of weight. ...See pages 15-20 of the Closing Ceremonies for further understandings of weight.

### *Movement I: Neo-Tech Physics*

If that symmetry-hiding ether were not uniformly present and fixed everywhere in existence, the universal laws of nature, such as gravity, would be arbitrary and fail. ...That fixed existence-field ether is not only necessary for existence, but *is* existence — conscious-controlled geometries throughout spacetime.

One must recognize that a fixed, weightless field *is* existence in which its modes of matter, energy, and consciousness interact. The mathematics and experiments will then fall into place for understanding and controlling existence.<sup>1</sup> ...Weight is simply what and where weightlessness is not.

#### Football-Stadium Experiments

From the macroworld perspective, conduct the following experiment: In a bowl-like football stadium,

<sup>1</sup> Controlling Existence at *All* Scales:

Any given astral volume of matter and energy will maintain its same weight before and after collapsing into a black hole. For, any collapsed volume will still contain the equivalent number of mass/energy units for equivalent ether-field displacements. Total spacetime curvature and total gravity will, therefore, be equivalent for any mass/volume in both its black-hole form and its fully expanded star, galaxy, or universe form. Now, by definition, light and other energy or mass forms cannot escape a black hole. Thus, a normal black hole cannot be detected, except by its gravity or perhaps by Hawking radiation. But nothing, not even gravity, can escape from universe-containing black holes that further collapse into Gravity Units. Why? Because mass and energy have collapsed into a symmetrical geometry of gravity curved in on itself. By collapsing to trillions of times smaller than a regular, microscopic black hole, the Gravity Unit becomes a *quasi point that causes no ether displacement*. It becomes a part of weightless ether. Thus, the Gravity Unit is essentially weightless with no current technology to detect its totally lost, inconceivably tiny weight and volume. ...This essentially weightless, undetectable Gravity Unit represents the underlying geometry of all existence *minus* consciousness. Now, all geometries of existence are subject to nongeometrical conscious control through Gravity Units.

Light cannot escape from black holes whose volumes are proportional to their masses. Neither light *nor* gravity can escape from Gravity Units whose “volumes” are *inversely* proportional to their *potential* masses. Does space, time, or motion exist beneath Gravity Units? Is our universe a Gravity Unit relative to other universes?

### *The Physics Behind Zonpower*

bolt on the arm of every seat a simple, low-cost, push-button, battery device. On pushing the button, a precisely tuned radio wave unique to each device is emitted. Beneath the stadium is a radio-wave detector hooked up to a computer. Now, fill the stadium with 100,000 football fans. As part of the halftime ceremonies, provide a laser-light display. Ask the spectators to keep their fingers on the signal button and immediately press it each time they see a green laser flash. Deliver 50 green flashes during the laser display.<sup>1</sup> The signal detector and computer will detect and record every person's signal, plotting each as a point along either side of a dividing line continuously calculated as the medium signal time.

If those signals plot reproducible, double sine waves for each 360° revolution of the stadium, watch out! For, conscious quanta as an integral part of a fixed existence-field has been experimentally demonstrated. From such verifiable and repeatable experiments, the Civilization of the Universe and its powers can become known and increasingly accessible to everyone on planet Earth.

How would a double sine wave in this experiment (1) identify the fixed ether of existence and (2) demonstrate consciousness as an integral mode of that ether? The Earth is orbiting the sun at about 67,000 miles per hour...or about 0.01% the speed of light. Thus, if consciousness or conscious control is an integral part of the fixed ether, those oriented most directly in line with the direction of that motion will, because of relativity effects, record on average minutely slower but statistically measurable response times reflected by points plotted below the medium line.

<sup>1</sup>An *at-rest* comparison of the speed of light versus the 5,000,000 pieces of data requires several orders of magnitude more preciseness to detect the sought effect. But, the experiment can be enhanced to detect the sought effect through added computer/trigonometric analyses that detect secondary changes in statistical data reflecting particles *not* at rest but traveling 67,000 mph through the GU ether relative to the sun. ...Other motions could be detectable, even overwhelming: for example, the high-speed motion of our galaxy through the GU ether. ...See pages 15-20 of the Closing Ceremonies for further understandings of this experiment.

### *Movement I: Neo-Tech Physics*

Those people sitting at a 90<sup>0</sup> angle to Earth's orbital motion will record on average a minutely faster response as reflected by points plotted above the medium line. The average of those points should then show a double sine-wave inclination for each 360<sup>0</sup> revolution of the stadium. Statistically, on calculating the effects of relativity, about 100 points should fall outside the statistical average, above and below the line, for each 360<sup>0</sup> revolution of 100,000 points of data recorded after each green laser flash. That 100 point variation per flash times fifty flashes should manifest itself as detectable, reproducible sine waves.

Why did the famous Michelson-Morley experiment in 1887, for which Michelson won the Nobel prize in 1907, "prove" that no fixed ether existed? Because the signals measured were photons of light, which are not intrinsic to the existence field. In other words, rather than seeking a weightless existence-field ether, a nonexistent matter-mode ether was sought. Therefore, no relativity effects would be detected for photons in that experiment. Thus, no detection of the "ether wind" could occur. But, what if consciousness or conscious control is intrinsic to existence — a constituent of the fixed ether? Then, with live conscious action, its mediating quanta particles called *thinkons* will cut through a fixed field of existence at 67,000 miles per hour relative to the sun — or greater speeds relative to other universe entities, such as other galaxies, or the entire expanding universe, or even the meta-universe — the Universe of Universes.<sup>1</sup>

---

<sup>1</sup>Electromagnetic forces such as photons would "disturb" but not measurably interact with a fixed ether of Gravity Units. Thus, photons would act independently and could not detect the "ether". By contrast, hypothetical thinkons would be intrinsic to Gravity Units, thus, would interact with the GU ether — the unmoving frame of reference for all existence. ...What if the speed through the GU ether is close to the speed of light, *c*, relative to the expanding universe?

(footnote continued on next page)

## *The Physics Behind Zonpower*

### Other Experiments: Clocks and Computers

Physicists have already demonstrated minute differences in time for clocks at different latitudes and altitudes. Those differences are attributed to differences in gravitational “forces”. Could similar experiments utilize super-computer-speed variations to detect both the orbital and rotational movements of the Earth through the GU ether?<sup>1</sup>

### Gravity Units: the Basic Unit of Existence

Gravity Units are neither energy nor matter.<sup>2</sup> But, in

---

(footnote continued from previous page)

Does that mean conscious beings could measurably, albeit minutely, think more efficiently facing one direction versus another direction? Worth experiments? What if conscious beings are traveling at all directions simultaneously through the fixed “ether” at near the speed of light? In that case, the “ether” could not be detected by Stadium Experiments and thinking rates would be equal in all directions. ...In any case, the point of the Stadium-Experiment idea is not only one of physics, but one of metaphor to illustrate the relationship of consciousness to existence.

<sup>1</sup>Neo-Tech physics with its ether field resolves the many mysteries of quantum mechanics, including Bell’s theorem in explaining the 1982 Alain Aspect’s “faster-than-light” experiments. Conscious control of the ether field removes the mysticism from quantum interpretations of CPT symmetry breakings, the Einstein-Bohr debate, Schrödinger’s cat paradox and Wigner’s friend, and even reducing Everett’s parallel universes from infinitely multiplying down to two: the universe and the antiuniverse (the anticivilization). ...Rational consciousness collapses the wavefunction of the antiuniverse.

<sup>2</sup>Energy and mass in the strictest sense do not actually convert from one to the other as suggested by  $E=mc^2$ . They are really just two different modes of the most fundamental field — the *existence field* consisting of quasi spacetime points and Gravity Units. From any Gravity Unit or quasi spacetime point can spring the mass and energy of an entire universe...an entire universe of quarks and electrons.

But, how do the quarks and electrons actually materialize? They materialize by breaking the symmetry of a Gravity Unit or spacetime point, which is pure symmetry at zero energy, zero mass, and zero gravity. That symmetry breaks into exactly equal but any amounts of positive and negative energy. The amount of energy depends on how the symmetry breaks. The positive energy consists of mass and

(footnote continued on next page)

### *Movement I: Neo-Tech Physics*

sort of a de Sitter sense, energy and matter meld into the symmetry of Gravity-Unit space or an *existence field*. From that fundamental symmetry or field of existence, all universes spring. Indeed, Gravity Units are that which the latest string theories are groping toward. Gravity Units not only occupy all space among matter and energy particles, but comprise all such particles themselves including quarks and electrons, including gravitons and photons.

The most fundamental controller of existence is human consciousness, the force that controls symmetry and Gravity Units. From those dynamics, existence evolves. ...Consciousness is the ultimate logic, beauty, and symmetry of physics from which future, major theories and discoveries will be predicted and confirmed.

---

(footnote continued from previous page)

energy fields comprising the dynamics of quark-and-electron motions. The negative energy consists of gravity comprising the dynamics of antimotions and slowing time. The total energy, mass, and gravity for any universe or its alternate mode of a Gravity Unit is zero, with all positive and negative energies exactly cancelling each other. Indeed, in the totality of any closed universe or Gravity Unit, the conservation laws of energy, angular momentum, and electrical charge disappear. They each cancel to zero. ...In a Gravity Unit, time stops and disappears into a spatial dimension or geometry.

What really are quarks and electrons? They are existence modes or geometries of quantized momentums that are relativistically compacted into mass particles surrounded by energy fields or wave functions.

Gravity Units and their existence field are controlled by conscious beings through unblocked, wide-scope, integrated thinking efforts. The fine-coarse graining of existence will reveal a quantized particle of conscious thought: the *thinkon*. As photons mediate force in the electromagnetic field, as W and Z particles mediate force in the weak nuclear field, as gluons mediate force in the strong nuclear field, and as gravitons mediate force in the gravitational field, thinkons mediate the force of consciousness in the existence field. All existence can be identified through various sum-over histories of thinkons. ...The thinkon particle can be deduced from football-stadium type experiments. What experiments could directly demonstrate the thinkon particle? The mathematics of noneuclidean, multidimensional geometries may provide the field equations for the existence field and its thinkons.

# Chapter 6

## A Cosmology of Infinite Riches

( From the F.R. Wallace's "Long Wave" publication ©1985  
simplified in 1995 to be contextually accurate if not technically precise )

This chapter is going to take you on a journey. A journey into realms you never knew existed. By the time you finish this journey, your thinking will change about you, this world, the universe, the future. That metamorphosis will occur on putting together 25 pieces of a puzzle. ...When the last piece snaps into place, your thinking will change forever.

More specifically, after reading this 25-part chapter, an array of new concepts will jell into a matrix on the final page. That matrix will eventually end all mysticism and deliver endless riches to this world.

### Part 1

#### A Neo-Tech Discovery

Tony, a lad of thirteen, was singing the theme song of Monty Python's "The Meaning of Life". The song went something like this:

*"Just remember that you are standing on a planet that's revolving at 900 miles per hour, that's orbiting at 90 miles per second. So it's reckoned that the source of all our power, the sun, and you and I and all the stars that we can see are moving at a million miles a day. That's figured out as moving at 42,000 miles an hour, in our galaxy called the Milky Way. Our Galaxy itself contains 100 billion stars. It's 100,000 light years from side to side and 16,000 light years thick. We are 30,000 light years from our galactic center and go around that center every 200 million years. Our galaxy is one of millions of billions in this amazing, expanding universe. The universe itself keeps on expanding in all directions at the speed of light. It's whizzing as fast as it can go, you know, at 12 million miles a minute. So remember*

### *Movement I: Neo-Tech Physics*

*when we are feeling very small and insecure, how amazing and unlikely is our birth. And pray that there is intelligent life somewhere up in space, 'cause we are down here on Earth."*

What makes those lyrics fascinating is that every statement is essentially factual and verifiable. But the song left out the most important part: Probability statistics overwhelmingly reveal that our universe contains at least a hundred million, and probably billions of Earth-like planets populated with conscious beings like you and me. Millions of conscious civilizations exist that are millions of years more advanced than our newly born, immature, still mystically oriented civilization.<sup>1</sup>

Moreover, that song was praying for what Neo-Tech already discovered. In fact, Albert Einstein spent his professional life searching in vain for what Neo-Tech discovered — the unifying, controlling element of the universe: *human-like consciousness*.

## **Part 2**

### Einstein and the Unifying Link

Throughout history, conscious beings on Earth have struggled with mystical notions of a “superior” consciousness, an imagined god, or some other “higher” power reigning over the universe. But today, by integrating the dynamics of mass and energy, Neo-Tech

---

<sup>1</sup>Since 1995, astronomers have been discovering by direct observation other planets orbiting nearby stars, providing mounting evidence for a super abundance of planets throughout our galaxy. Then, on August 7, 1996, NASA announced direct evidence from a Martian meteorite discovered on Earth in the early 1980s that cellular life evolved on Mars over 4.5 billion years ago. The implied ease that life evolved in at least two separate places in our own solar system lends stunning support to the Long-Wave hypothesis that life — evolved conscious life — exists on billions of planets throughout our universe . . . Moreover, an entirely different genetic form of life called Archaea, which needs no light, oxygen, and lives at 400°F, has recently been discovered on Earth.

## *A Cosmology of Infinite Riches*

reveals a relationship between our own Earth-bound consciousness and all existence. The unifying power that orchestrates existence is not some mystical god or “superior” being. But, as demonstrated in this chapter, that unifying power is conscious beings — conceptual/introspective beings as you and I.

Einstein never accomplished his ultimate goal of unifying all forces. He never derived a Unified-Field Theory. But extrapolating Einstein’s work into Neo-Tech reveals the unifying entity of existence — the only integrating force of the universe: human-like consciousness.

Why did Einstein not realize that fact? One reason perhaps stems from his abhorrence for unpredictable actions among the dynamics of nature. For that reason, he disliked quantum mechanics or anything that suggested arbitrary or “god-like” interventions. Always searching for order, Einstein focused on only two components of existence: mass and energy integrated with the geometries of time and space. He believed those components could always be explained, exactly and predictably. Thus, he never considered the third and controlling component of existence: volitional consciousness — a free-will, conceptual/introspective/integrating conscious mind.

Perhaps his passionate dislike for the unpredictable and disorder caused him to overlook consciousness as the third spacetime component of existence. For consciousness can and does unpredictably alter the dynamics of nature, every moment, throughout the universe. Yet, from the widest perspective, consciousness brings the most elegant order and predictability to the universe as demonstrated in this chapter.

All past attempts to link consciousness with existence

### *Movement I: Neo-Tech Physics*

were based on mystical, “higher forms of consciousness”. Such irrational, ethereal linkages always originated as dishonest, unfounded assertions by mystics or neocheaters conjuring up religious and political power. But the Neo-Tech discovery of human-like consciousness as the unifying element of existence can be scientifically established not only with theory but with direct observation and experimental proof.

Understanding the conscious mind as the controlling, unifying element of existence first requires understanding the *unchanging* nature of consciousness and existence versus the *changing* nature of matter and energy:

#### **Part 3**

##### The Unchanging, Eternal Nature of Consciousness

As first identified by Professor Julian Jaynes of Princeton University and described in Chapter 28, the conscious mind was discovered within nature’s bicameral mind<sup>1</sup> about 3000 years ago. Given sufficient information, that first conscious mind had the same capacity as conscious minds today to understand anything in the universe from Einstein’s theories to computer technologies and beyond. Consider the astonishing conscious minds of Socrates, Plato, Aristotle, Archimedes that were flourishing only a few centuries after the discovery of consciousness. They would, for example, have no problems whatsoever in understanding Einstein’s theories

---

<sup>1</sup>The bicameral mind was man’s intelligent, nature-evolved mind before he discovered consciousness as a conceptual/introspective mind. The conscious mind is not a part of nature’s evolutionary process. But, rather, consciousness is a discovery by man that lies beyond the dynamics of nature. This discovery process is explained in Chapter 28, pages 241-256. ...When referring to consciousness, the word *discovered* is used when perhaps the word should be *invented*.

## *A Cosmology of Infinite Riches*

or computer technology. Given the information, they certainly had the capacity we have today to understand anything in the universe.

In other words, while much is unknown, nothing is unknowable to the conscious mind. By nature, the conscious mind requires no change or evolvement to understand anything in existence.<sup>1</sup> On acquiring the correct knowledge, conscious beings today are capable of doing anything within the immutable laws of physics throughout the universe.

Consciousness is man's discovery that sprang from his nature-evolved bicameral mind. Consciousness is not part of nature's evolutionary processes, but is a natural phenomenon of existence.<sup>2</sup> Thus, the first conscious minds on this planet 3000 years ago are the same as the conscious minds on this planet today...and the same as conscious minds in any galaxy ten million years from now. All conscious minds have the same ability to understand anything in existence.

Consciousness, therefore, does not evolve. It exists eternally, unchangingly.<sup>3</sup> And its capacity to understand anything in the universe transposes into forever fulfilling the supreme responsibility of conscious beings. That responsibility is to preserve forever the supreme value of the universe — individual consciousness. To meet that responsibility means achieving non-aging biological immortality as described in Parts 12 and 16 of this chapter.

---

<sup>1</sup>Individual minds are endowed with various capacities. Individuals then develop or retard their capacities through either conscious efforts or mystical defaults. But consciousness itself is either there to be used or abused...or it is not there.

<sup>2</sup>As demonstrated later in this chapter, consciousness has always existed throughout the universe as an integral part of existence.

<sup>3</sup>Consciousness is the fundamental invariance and overarching symmetry of existence.

*Movement I: Neo-Tech Physics*

**Part 4**

The Unchanging, Eternal Nature of Existence

Who Created Existence? And who or what created the creator of existence? And then who or what created the creator of the creator, and so on regressing forever. Such questions are, of course, unanswerable. But, such infinite-regression questions need never be answered.<sup>1</sup> For existence is primary and axiomatic — meaning irreducible, self-evident, and requiring no further explanation. While new realms of existence such as galaxies and universes are constantly being created, nothing creates existence itself. It simply exists. Existence always has and always will exist. And that primacy of existence existing forever is independent of consciousness or anything else. ...The most profound of all concepts as underscored by Einstein is simply: Existence exists. What is the alternative? No alternative is possible unless one accepts the contradiction that existence does not exist.

Throughout eternal time, existence constantly generates new realms of life out of which conscious minds spring from the evolvement of bicameral minds — minds of evolved intelligence capable of discovering consciousness. Once consciousness is discovered and harnessed, it can, with accumulating knowledge and productive efforts, learn to forever muster new realms of existence. From those new realms evolve new life. And from new life evolve bicameral minds from which conscious minds spring.

Throughout eternal time and space, the following creation cycle always has existed and always will exist:

---

<sup>1</sup>The *Neo-Tech Discovery*, Concept #28 identifies the specious nature of infinite-regression questions.

*A Cosmology of Infinite Riches*

Table 1

**THE CREATION CYCLE**

**Realms of existence created by conscious beings → life evolved → bicameral mind evolved → consciousness discovered → mysticism developed to replace lost, bicameral gods → mysticism and neocheaters take control of conscious beings → partial freedom and capitalism developed → Neo-Tech discovered → guiltless prosperity, power, romantic love revealed to value producers → mysticism and neocheating are uncompetitive and, thus, eliminated → biological immortality achieved → control of the universe learned → new realms of existence created by new conscious beings → and so on, forever expanding and repeating the cycle.**

Stated another way: Space, time, consciousness, and existence are eternal; they have no beginning or end. Throughout time eternal, stars, solar systems, and Earth-like planets constantly form anew. Thus, living organisms and conscious beings constantly form anew. Throughout never ending time and universes, limitless planets forever generate life. That life, in turn, forever generates nature's evolutionary processes that always end with conscious beings.<sup>1</sup> ...Conscious civilizations free of mysticism always survive, prosper, take control of nature and then existence.

Given the endless number of water/oxygen abundant, Earth-like planets forever spinning in endlessly evolving existence, one realizes life and consciousness have forever co-existed in limitless abundance. Human-like

---

<sup>1</sup>As explained in Chapter 28, pages 241-256.

*Movement I: Neo-Tech Physics*

consciousness, therefore, is as much a part of eternal existence as are mass and energy. When consciousness is integrated with endless existence and time, the stunning conclusion unfolds that human-like consciousness is also unchanging and has always existed.

Consciousness, mass, and energy are the three macro components of existence. Those three components are inextricably linked and must be integrated into all physical understandings and mathematical accounts of our universe. If only the mass and energy components existed, then all existence would be predictable and predestined through the dynamics of nature and physics. But further research and refinement of data will show that seemingly predictable actions of the universe are actually unpredictable from a mass and energy accounting alone. That unpredictability arises from not accounting for the influence of volitional conscious beings throughout existence.

Human-like, volitional consciousness is:

- 1) the third and integrating component of existence,
- 2) the unifying component or force never recognized by Einstein,
- 3) the supreme component of existence that controls the dynamics of nature, mass, and energy to forever preserve and evolve conscious life,
- 4) the eternal component that has existed and controlled existence, not for trillions of years, but forever.

\* \* \* \*

The balance of this chapter develops a non-mathematical, nontechnical understanding of how

*A Cosmology of Infinite Riches*

conscious beings dominate the universe and muster new realms of existence and life through increasing control of mass and energy.

**Part 5**

The Changing Nature of Mass and Energy:

The Grand Cycle

All events of the universe fall within nature's mighty Grand Cycle, the dominating, all-inclusive energy wave involving the entire universe. That cycle consists of nature's longest energy wave exactly counterpoised with nature's shortest energy wave. All other cycles, waves, or forces of nature, ranging from cosmic and gamma rays to radio waves fall within the Grand Cycle. ...The Grand Cycle is described in Table 2 below:

<p>Table 2</p> <p><b>The Total History Of The Universe</b> (omitting the unifying element of consciousness) is contained in <b>THE GRAND CYCLE</b> which consists of The Googol-Year Explosion Half-Cycle, Long Wave</p> <table border="1"><tr><td>with gravity-wave dissipation with proton decay with quark and electron annihilation</td></tr></table> <p>The Googol-Year Implosion Half-Cycle, Long Wave</p> <p>The Googolth-of-a-Second Full-Cycle, Short Wave (black hole/white hole)</p> <p>(a googol equals <math>10^{100}</math> or 1 followed by 100 zeroes)</p>	with gravity-wave dissipation with proton decay with quark and electron annihilation
with gravity-wave dissipation with proton decay with quark and electron annihilation	

Movement I: Neo-Tech Physics

\*When time is annihilated, the next event (birth of a universe) is instantaneous to the previous event (end of a universe). No time passes between the two events.

## *A Cosmology of Infinite Riches*

A capsulized account of the Grand Cycle starting with the so-called big-bang birth of the universe is illustrated in Table 3 on page 56.

Table 3 also indicates that all activity during nature's longest wave, the googol-year exploding/imploding cycles, exactly equals all activity occurring during nature's shortest wave, the googolth-of-a-second cycle. An understanding of that seeming paradox will evolve over the next few pages.

### **Part 6**

#### The Explosion Cycle

Within the universe, all existence oscillates in one Grand Cycle spanning trillions of years. The actual time to complete that Cycle is not relevant here, but will someday be scientifically measured by us on Earth. But, even today, experiments and calculations from the astrophysical Doppler effect<sup>1</sup> show our universe is in the explosion, energy-to-matter half cycle. Our universe is exploding outward at near the speed of light, scattering away from a so-called "big-bang birth" with ever increasing entropy<sup>2</sup> — a measurement of spent energy.

<sup>1</sup>A change of light-wave frequencies caused by a moving light source such as a star. The wavelength of light from a star moving away *red shifts* — becomes longer — stretches toward the color red.

<sup>2</sup>Entropy involves the second of the three laws of thermodynamics for *closed* systems. Entropy is simply the movement of events toward their highest probability or disorder.\* Entropy measures irretrievable energy spent on scattering a closed universe. ...For every star that explodes, every pebble that drops from a cliff, entropy and disorder irreversibly increase throughout the universe. Approaching infinite entropy, all usable energy throughout the closed universe is spent. All is flat and scattered to the maximum. No star is available to explode, no cliff is available from which a pebble can fall. No wind blows. All is dead and still. Stars are collapsed, cold and dark, or not at all. No sound or light exists: perhaps not even mass exists. Perhaps only unusable radiation near and always approaching 0°K exists.

\*The same probability concept applies to formulating hypotheses: always formulate toward the highest probability. Thus, the formulation of the Long-Wave hypothesis.

## *Movement I: Neo-Tech Physics*

Energy available for work throughout the universe will keep decreasing as the universe spreads out for trillions of years until all energy is spent. In that state, trillions of years after the initial big-bang explosion, the universe exists at its maximum scattered or disordered state — as inert residue of an exploded bomb. At that moment, the entire universe is motionless, energyless, and while always approaching absolute zero Kelvin temperature ( $0^{\circ}\text{K}=-273.16^{\circ}\text{C}=-469.67^{\circ}\text{F}$ ), all energy is in the form of uniform, unusable heat radiation. ...Do subatomic arrows of time exist? Will protons, quarks, and electrons eventually decay or annihilate to end in radiation for all subatomic particles and motions?<sup>1</sup>

### **Part 7**

#### The Implosion Cycle

With no usable energies or motions, the universe is dead. Entropy is essentially infinite. Entropic heat death has occurred. Without the force of consciousness, one incredibly weak force remains — by far the weakest of nature's forces — gravity. And, at that moment, in the absence of all other forces, gravity begins acting as an invisible cosmic hand destined to fulfill its function as the ultimate housekeeper, healer, and energy restorer of the universe. For, at that moment, gravity begins pulling a

---

<sup>1</sup>Are gravity waves the final dissipater of energy and motion? Or does mass itself seek higher entropy? With incredibly long half lives of  $10^{32}$  years or perhaps up to  $10^{220}$  years, do protons themselves decay toward infinite entropy? What about the energy and mass of a quark, an electron? Do quarks and electrons finally decay or annihilate with antiparticles? In any case, without conscious intervention, entropy death of a closed universe will eventually occur. ...**The laws of thermodynamics, however, apply only to closed systems. Existence itself is eternally open and evolving. Thus, any meaning of entropy to existence disappears, including the idea of entropic heat death.**

## *A Cosmology of Infinite Riches*

totally scattered, exhausted universe back toward increased order while gradually restoring potential energy. Increasingly restoring energy by reversing entropy, this cycle is the mirror image of the explosion cycle and equally lasts trillions of years. In that implosion cycle, gravity eventually pulls the universe back into essentially perfect order...an ultimate-compact, black-hole<sup>1</sup> bomb, ready to explode into another big bang as entropy races toward zero.

As contraction of the universe begins, gravity gradually changes from the weakest to the mightiest force of nature. Starting as an unimaginably faint but constant pull, gravity begins rebuilding the scattered universe by drawing all energyless existence closer together — perhaps initially by a millimicron in a million years. But every movement closer together increases the pull of gravity.<sup>2</sup> That, in turn, increases the speed at which the universe condenses toward an ordered, densifying mass. From the beginning to the end of that condensing-collapsing-imploding cycle, gravity steadily moves toward increasing all forms of energy ranging from potential and kinetic energies to

---

<sup>1</sup>The universe-containing black hole described here is matter and energy condensed beyond the critical mass and density needed to be captured, collapsed, and then imploded by its own gravity. When the collapse is complete, the resulting black hole can convert into a white hole, exploding into a new universe. The entire black-hole/white-hole cycle occurs in the tiniest fraction of a second because all information, entropy, and time obliterates between the two Grand Cycles.

<sup>2</sup>Gravitational attraction increases proportionally to the amount of existence involved multiplied by the inverse square of the distances between the eventual masses and energies. That means gravitational attraction accelerates exponentially as masses and energies are collapsed toward unity. Fields of existence are rolled ever closer together, perhaps into multidimensional space\* and then into Gravity Units.

\*Up to a twenty-six dimensional space has been mathematically derived in superstring theory. ...Most of those dimensions are rolled up into inconceivably tiny volumes or strings that vibrate at characteristic resonances.

### *Movement I: Neo-Tech Physics*

chemical, heat, and nuclear energies.

In the explosion cycle, all energy escapes the diminishing grip of gravity. But in the implosion cycle, no energy escapes the increasing grip of gravity. In this cycle, the universe keeps moving together. Gravity holds all forms of increasing mass and energy within the same shrinking unit as the universe races closer together at accelerating speeds.

#### **Part 8**

##### The Googolth-of-a-Second Cycle

On drawing the universe *toward* a never reachable point, the accelerating pull of gravity begins compacting matter and energy toward a super-ordered, super-compact black hole. Becoming the mightiest physical force in existence, gravity begins crushing the universe. All forms of energy blend into all forms of matter and vice versa. All molecules, atoms, protons, neutrons, electrons, sub-atomic particles, and energy waves of the universe are crushed together into unrecognizable forms of matter and energy. That rapidly compacting universe assumes entirely different forms of existence occurring only during that nearly instantaneous moment of super compaction at the final instant of the implosion half cycle.

Then, as the entire universe implodes to the size of a basketball, those bizarre forms of existence keep changing with increasing rapidity. Undergoing seemingly infinite changes into ever more radical forms of existence, the universe crushes inward at near the speed of light, imploding to golf-ball size, then to pinhead size, then to pinpoint size. Everything in the universe, including trillions of stars and billions of galaxies, even black holes, are crushed into that pinpoint. The universe then flickers

## *A Cosmology of Infinite Riches*

from microscopic to submicroscopic size then to sizes unimaginably smaller than a proton — all while continuously changing into near infinite varieties of unimaginable radical structures shrinking toward zero volume and infinite density. ...The end condition may or may not be different, more disordered, from the beginning condition.

Most incredibly, the total of all mass/energy/activity changes that occur during nature's longest cycle (the seemingly infinitely long, googol-year explosion and implosion half cycles) is exactly counterpoised or duplicated during nature's shortest cycle (the seemingly infinitesimally short, googolth-of-a-second cycle). In other words, the total action during nature's longest cycle of trillions of years is exactly counterbalanced during nature's shortest cycle occurring in the tiniest fraction of a nanosecond<sup>1</sup>.

### **Part 9**

#### The Universe Turns Inside Out From Implosion to Explosion

At that final instant, all activity ceases as the universe is essentially, but not actually, at zero volume, infinite density, and zero entropy. At that final instant, all the universe is in the form of gravity/existence symmetry. All information and time from the previous Grand Cycle has vanished. At that moment, with a quantum flux, a new spacetime is born — the universe turns inside out from the implosion cycle to the explosion cycle. At once, the universe converts from increasing order and compaction to “nothing” then to increasing disorder and scatteration, from decreasing entropy to increasing entropy, from implosion to explosion. At that instant, the entire universe

---

<sup>1</sup>A nanosecond is one billionth of a second.

### *Movement I: Neo-Tech Physics*

is cataclysmically destroyed and then instantly reborn from seemingly nothing — reborn in a big-bang inflation of a trillion times a trillion suns.

Created from seemingly nothing, a mammoth composite of post-inflation mass and energy expands in every direction at nearly the speed of light. That ball of mass and energy keeps expanding for centuries, millennia, or perhaps longer before blowing apart, scattering, and then congealing its mass and energy. That scattering and congealing eventually forms visible stars, solar systems, planets. During our current googol-year cycle, millions of Earth-like planets and conscious civilizations formed billions of years before Earth's formation. And millions of Earth-like planets and conscious civilizations will form billions of years after Earth's formation.

#### **Part 10**

##### **Super Grand Cycles**

Assuming similar gravitational dynamics operate among universes,<sup>1</sup> similar Grand Cycles would occur among the universes themselves, but on endlessly greater scales. And then, ever longer cycles exist among ever larger clusters of universes, and so on, eternally. For each greater cluster of existence, its exponentially longer Grand Cycle would have occurred endlessly in eternity.

From the perspective of forever greater Super Grand Cycles, infinity becomes two dimensional with one vector forever reaching into space, eternally gathering greater and greater mass and energy. Concomitantly, the other vector forever reaches into time, eternally repeating ever longer cycles. Thus, travelling on those two vectors, existence

---

<sup>1</sup>Currently, Earth beings have no way to observe other universes. Thus, no way is currently known to establish if gravity operates among the universes — throughout the meta-universe.

## *A Cosmology of Infinite Riches*

evolves forever throughout the endless universes.

From the limited perspective of our world and universe, the speed of light seems incredibly fast and free. But from the perspective of endlessly evolving existence and ever greater clusters of universes, the speed of light seems increasingly slow and restricting. For, the process of escaping such super big-bangs seems chained to the speed of light. Indeed, being limited by the speed of light, a seemingly endless time would be needed just for those unimaginably large masses to escape their “instantaneous”, initial big-bang inflations in their Super Grand Cycles.

Space, time, and distance throughout existence are mind-boggling because they truly never end.

### **Part 11**

Grasping the Ungraspable:

The Infinity of Existence

Within the Milky Way, our relatively small galaxy, billions of stars and planets exist that are millions of years older than our Earth. Within our universe, billions of galaxies exist that are larger than our Milky Way. Throughout the Grand Cycle, millions of stars, solar systems, and Earthlike planets constantly form anew. Among those millions of Earthlike planets abundant in water and oxygen, the dynamics of nature immutably generate life. Life, in turn, always undergoes nature’s evolutionary process that ends with conscious beings...and conscious beings always evolve to control endless existence.

Indeed, life itself, its evolutionary processes, and thus, conscious beings themselves, have always existed throughout the universe as its third and unifying/integrating/controlling component. And that unifying/

### *Movement I: Neo-Tech Physics*

integrating/controlling component of the conscious mind was the component Einstein always sought but never recognized. For, he focused only on the mass and energy components of the universe while overlooking the component of consciousness.

When dealing with infinity, relationships among time, distance, knowledge, events, and probabilities become meaningless, resulting in seemingly bizarre situations. Consider a realistically impossible event here on earth for which the odds are a billion to one against occurring. When put in the context of infinite time, such an improbable event will not only occur with absolute certainty, but will occur an infinite number of times. Throughout infinity, whatever is theoretically possible becomes an absolute certainty that occurs an endless number of times.

To further demonstrate the bizarreness of infinity: Take an essentially impossible event that might occur once every billion years. Now take an event that happens constantly, say, once every nanosecond. Relative to infinity, both events will reoccur endlessly, forever into the future. Thus, from the perspective of infinity, no difference exists between their occurrences, for they both occur with endless repetition. So, juxtaposed against infinity, no difference exists between an event that occurs every nanosecond versus an event that occurs once every billion years. For, throughout infinity, both events occur infinite times.

Also, in the context of infinity, no difference exists between distances throughout space. For, throughout infinity, no reference points exist to measure differences among time or distances. ...Infinity is the only concept in existence without identity or boundaries. Thus,

## *A Cosmology of Infinite Riches*

infinity<sup>1</sup> is radically unique from all other concepts.

To grasp the meaning of infinite existence, one cannot view existence from the perspective of a finite planet or a finite universe. Instead, one must view existence from the perspective of eternal endlessness. From that perspective, no difference exists between a mile and a trillion miles, or a year and a trillion years, or a forest fire and a star fire, or a lightning bolt and a big-bang birth of a universe. For, no reference points exist to compare distance, time, knowledge, or events of any magnitude when forever really means forever.

*As shown later, certain deterministic concepts in the above four paragraphs are valid only in the hypothetical absence of eternal, free-will conscious life.*

### **Part 12**

#### Achieving Biological Immortality Now

From a perspective of the infinite time available throughout existence, all newly formed life evolves almost immediately into a highly intelligent brain that can invent consciousness from nature's bicameral mind. The resulting conscious beings then, nearly instantly:

- 1) take control of nature,
- 2) render obsolete nature's evolutionary "need" for life-and-death cycles,
- 3) evolve into the Neo-Tech/Neothink mind,
- 4) cure irrationality and its mysticism, the only disease of the conscious mind, and
- 5) achieve non-aging immortality in order to live forever with growing prosperity and happiness.
- 6) control existence.

---

<sup>1</sup>Infinity, as explained in the footnote on page 14, is a useful mind-created concept that does not exist in reality.

### *Movement I: Neo-Tech Physics*

But from a perspective of the brief, finite time available for contemporary life on Earth, exactly how and when will biological immortality occur? First consider that, today, newly discovered Neo-Tech will eradicate the disease of irrationality and its parasitical neocheaters. Without the constant destructiveness of professional parasites, conscious beings will quickly, naturally develop commercial biological immortality as described below.

As Neo-Tech cures the disease of irrationality and vanishes those professional parasites, biological immortality will become a certainty for most human beings living today, regardless of age. In fact, today, freedom from irrationality will almost guarantee biological immortality for most people. And that could happen without massive efforts or spectacular medical discoveries. What is necessary, however, is the curing of irrationality and its mysticism. For irrationality, directly or indirectly, eventually kills all human beings while preventing biological immortality for all conscious beings.

Irrationality is the only disease of human consciousness. The symptoms of irrationality are harmful dishonesties and mysticisms. Those symptoms undermine the ability to integrate together the values of rationality *and emotions*. What is the value of emotions? The all-important value of emotions is to experience happiness — the bottom-line moral purpose of conscious life. But, mysticisms mixed with emotionalisms dishonestly assume a primacy over reason and reality. That dishonesty, in turn, casts mortal harm over every individual human being on planet Earth.

Neo-Tech, which is fully integrated honesty, eradicates the disease of irrationality. Thus, the immediate evolvment of biological immortality need not require

## *A Cosmology of Infinite Riches*

quick technological breakthroughs, major research projects, or even explicit, direct efforts. But rather, with Neo-Tech, the process of biological immortality can begin immediately within one's own self. And that process will culminate with definitive biological immortality as the 3000-year disease of irrationality is cured by Neo-Tech worldwide.

How will biological immortality actually happen? First, consider:

- a world without irrationality,
- a world without professional value destroyers, parasitical elites, and dishonest neocheaters,
- a world without their destructive institutions of usurped power, such as the FDA (the most health-and-life destroying entity) and the IRS (the most value-and-job destroying entity),
- a world without the *anti-business* elements of irrational governments.
- a world without irrational governments.

Without life-corroding irrationality and its virus-like neocheaters draining everyone, business would explode into an endless productivity spiral. That value-driven explosion would launch human life into upward-spiraling prosperity with continuously expanding life spans.

Consider, for example, how the dynamics of computer technology have so far operated relatively free of parasitical elites, professional value destroyers, and government interference. Being relatively free of irrational regulations, force, coercion, and destructiveness, the computer industry has burgeoned. Computer technology is now delivering soaring capacities for processing and utilizing new knowledge at rates faster than new

### *Movement I: Neo-Tech Physics*

knowledge can be integrated and used by human beings. Such explosive advances in computer technology, or any technology, requires being free of government irrationality and its professional parasites.

The rational, conscious mind is synonymous with the productive, business mind. The value-creating business mind is the antithesis of the value-destroying political mind. The destructiveness of socialist, fascist, and religious societies prevents their citizens from developing efficient business-driven technologies. Indeed, all such societies are controlled by parasitical elites using force and deception to usurp harmful livelihoods. Such people live by attacking, draining, harming, or destroying value-and-job producing businesses...and their heroic creators and competitive expanders.

By contrast, explosive computer-like advances in human health and longevity directed toward commercial biological immortality will naturally occur in any mystic-free, business-driven society. But exactly how could biological immortality quickly occur today in a mystic-free society? Consider, a 60-year-old person today having a life expectancy of 20 more years. In a rational, business-minded society, uninhibited market forces will rapidly develop the most valuable products and technologies. ...The most valuable of all technologies — the quality preservation of conscious life — will advance so rapidly that when that person reaches 70, high-quality life spans will have expanded to 100 or 120 years, or more.

In a rational, mystic-free society, knowledge and technology accelerate geometrically. Thus, when that person reaches 100, high-quality life expectancy will have expanded to 140 or 180 years, or more. Those

## *A Cosmology of Infinite Riches*

accelerating extensions of life expectancy would provide the time needed to develop *definitive biological immortality* for almost every value producer living today. Indeed, in the coming years, Neo-Tech will cure the disease of irrationality to eradicate physical diseases and death among all conscious beings on planet Earth.

In a competitive business-driven atmosphere free of irrationality, the life spans of conscious beings will advance faster than the passing of years. Thus, the result of Neo-Tech eliminating irrationality is immediate, de facto biological immortality. Then, rapidly accelerating health technology — including antiaging genetics — will yield that *definitive biological immortality*.<sup>1</sup>

Therefore, by replacing all forms of irrationality, mysticism, and neocheating with the fully integrated honesty of Neo-Tech, nearly everyone today can live forever.<sup>2</sup> Most important, with Neo-Tech, one can live forever with increasing prosperity, happiness, and love.

Almost anyone living today can survive to biological immortality by (1) replacing the death disease of irrationality with the life elixir of Neo-Tech and by (2) stopping mystical behaviors and destructive actions, such as making problems where none exist, smoking, and becoming mentally and physically unfit. Almost everyone today can and will achieve biological immortality by rejecting irrationality and neocheating both in one's self

---

<sup>1</sup>Curing death is described in the *Neo-Tech Discovery*: specifically in Part V and generally in Appendix F titled, *Achieving Commercial Biological Immortality in Our Lifetime*. ...Mortality is natural in life, *except* for conscious beings whose nature *is* immortality — the same immortality God possesses!

<sup>2</sup>The longer a productive individual lives, the more valuable that person becomes through his or her increased knowledge, experience, competence, productivity, and capacity for business and happiness. Thus, in any rational, mystic-free society, the motivation for and value of biological immortality increases as the age of the individual increases.

### *Movement I: Neo-Tech Physics*

and in others. The key for everyone is to first recognize and then reject the disease of irrationality and mysticism from within one's own self. Then one can effectively reject irrationality and mysticism in others.

Life is everything. Death is nothing. Irrationality trades everything for nothing. Irrationality is a terminal disease that breeds professional value destroyers who eventually harm or kill everyone. ...Today, the disease of irrationality is totally unnecessary since it can be cured with Neo-Tech. Thus, through Neo-Tech, essentially everyone can live forever with ever increasing prosperity and happiness.

Also, as demonstrated in Neo-Tech Advantage #31 of the *Neo-Tech Discovery*, conscious civilizations much advanced beyond ours would by necessity be free of irrationality and neocheating. For, by holding irrational premises, no civilization can advance much past the Nuclear-Decision Threshold<sup>1</sup> without destroying itself. ...In rational mystic-free societies, the idea of dishonesty is unknown.<sup>2</sup> Thus, *unknown* ideas also include war, murder, deception, fraud, forced taxation, conscription, racism, theft, assault, envy, anxiety, guilt.

### **Part 13**

#### Infinite Knowledge

To quote from the first Neo-Tech World Summit (March, 1986) keynote address titled, "Three Steps to Achieving Commercial Biological Immortality in Our Lifetime" as quoted on the next page:

---

<sup>1</sup>Planet Earth is currently at that Nuclear-Decision Threshold. For our civilization to survive, the disease of irrationality must be cured.

<sup>2</sup> Science-fiction stories and movies of evil or hostile aliens are illogical. For, no civilization with the nuclear-energy technology required for interstellar travel could survive as irrational, evil, violent, corrupt, or criminal in *any* way.

### *A Cosmology of Infinite Riches*

“Living forever would be boring. False. Exactly the opposite is the fact. For creating and increasing values is the essence of a happy, exciting life, which, in turn, gives increasing motivation to live forever. Indeed, all new values come from expanding knowledge. And each new unit of knowledge generates several newer units of knowledge. Therefore, the ability to generate new knowledge is limitless. The notion of finite knowledge is only an illusion from our present, limited-knowledge perspective. Indeed, knowledge is not simply uncovered; it is generated from past knowledge. Thus, each day, the discovery of new knowledge generates ever greater bodies of ever newer knowledge and values.

“No one in the last century could have, for example, imagined any aspect of quantum mechanics, the computer age, genetic engineering, superconductivity, or fusion energy. For, everyone was many layers of knowledge away from even imagining those twentieth-century achievements. Yes, knowledge upon knowledge and achievement upon achievement will be generated anew — forever — by human consciousness.

“Human consciousness is the only force in the universe not predetermined by nature. Indeed, only consciousness can alter or go beyond the fixed patterns of nature. Consciousness obsoletes nature’s blind, life-and-death survival cycles when applied to human beings. ...In a society free of irrationality, every conscious being produces open-ended achievements for society without bounds or limits. Thus, by producing an eternal stream of benefits for society, each conscious life continues happily, forever.”

#### **Part 14**

Immortality — the Natural State of Consciousness

Thousands of years ago, before anyone on Earth grasped the concept of geometrical shapes, a man looked

### *Movement I: Neo-Tech Physics*

toward the heavens at the moon, then at the sun, then at the eyes of his woman. Suddenly he grasped the concept of “round”...a strange, new concept that no one had grasped or understood before. From that geometric concept came the circle, the wheel, the principles of mathematics and science, the automobile, the computer, and the latest theories of gravity. Yet, essentially no one today realizes that a concept so naturally integrated with life and taken for granted as the shape “round” was at one time unknown, strange, and spectacular to discover.

Likewise, a few thousand years from today, the natural physical state of conscious man — biological immortality — will be so natural, so integrated with life, so taken for granted that only historians would realize how during a brief time in faded history conscious beings were irrational and thus mortal. Indeed, mortality is not only the most unnatural, bizarre state for conscious beings, but is an essentially unknown state among rational, mystic-free, conscious beings throughout the universe.

In addition to biological immortality as revealed in the *Neo-Tech Discovery*, conscious man’s most natural, psychological state is happiness. Essentially all human unhappiness arises directly or indirectly from the disease of irrationality and its mysticisms. With irrationality cured, happiness will become so natural and commonplace that in future millennia few if any will know that unhappiness and death ever existed.

### **Part 15**

Einstein’s First Oversight:

Failure to Integrate Human Consciousness *On Earth*  
With the Grand Cycle

Consider us Earth beings with our technology of less than 3000 years. Consider our advances projected by the

*A Cosmology of Infinite Riches*

year 2000, only a few years away. Then project that rate of growth into a geometrically increasing curve of knowledge soaring toward a thousand years hence, a million years hence. One can easily see that conscious beings are altering the dynamics of nature at ever increasing rates. And through a relatively minuscule time span within the incomprehensibly long, googol-year cycle, conscious beings on Earth can quickly learn to dominate nature.

After only the first few centuries of consciousness, around 500 BC, human beings begin controlling nature faster than nature's evolutionary processes. Witness, for example, the development of consciousness from only 3000 years ago, an invisibly short time span in the Grand Cycle as shown in Table 4 below. Earthbound consciousness has already obsoleted nature's evolutionary processes: Today, man-made shelter, food, medicine, and technology

### *Movement I: Neo-Tech Physics*

advance human survival and well-being much faster and better than do the slow evolutionary, adaptive processes of nature. In less than 3000 years, consciousness is already taking over the dynamics of nature on Earth. With that takeover, consciousness obsoletes nature's protective/survival mechanism of death. Thus, through time, consciousness mandates biological immortality for all conscious beings.

Becoming free of irrationality, Earth beings will not just increasingly control nature, but will dominate nature just a few hundred years hence as explained below.

During the next million years, planet Earth will geologically remain relatively static with basically the same oxygen, land, and water conditions. But, with geometrically accelerating knowledge, we on planet Earth will soon dominate and control nature. Consider, for example, the world's largest man-made lake accomplished by building Hoover Dam with only 3000 years of accumulated, conscious knowledge. That man-made feat controlled and then dominated nature's mighty Colorado River.

From the discovery of consciousness to the first automobile took 2900 years of accumulated knowledge. Then, within 100 years, man went from the auto to the airplane, to the moon, and now toward super computers for everyone. ...Knowledge accumulates geometrically, quickly leaving nature's forces far behind as if frozen compared to the incredibly fast, always accelerating generation of new knowledge.

Perhaps only a few-hundred years hence, we Earth beings will be accumulating new knowledge at lightening speeds. With that rapidly increasing knowledge, we will easily, for example, corral heavenly asteroids into man-

## *A Cosmology of Infinite Riches*

made orbital matter to fill our needs, just as today we corral river water into man-made lakes to fill our needs. ...What needs will we Earth beings have a thousand years from now, a million years from now? And how will we use our super-advanced knowledge and tools to control nature in filling those needs?

A thousand, even a million or a billion years, is an incredibly short time, a mere instant, within the Grand Cycle as shown in Table 4. But, well within that brief time span, we Earth beings can also accumulate the knowledge to dominate and drive the universe — to interdict nature’s mass/energy dynamics in preventing the Grand Cycle from ever completing itself.

### **Part 16**

Einstein’s Second Oversight:

Failure to Integrate Consciousness *Beyond Earth*  
With the Grand Cycle

Consider the billions of Earth-like planets existing within our own universe that are billions of years older than Earth. Through immutable evolutionary processes among those billions of Earth-like planets, conscious beings have evolved with millions or billions of years more advanced knowledge than we have on Earth today. ...Just imagine the technology and capacity of those conscious beings who have enjoyed geometrically accumulated knowledge for a million years, a billion years.

Human-like consciousness is the only entity in existence that can alter the inexorable course of nature. Human consciousness quickly advances from building cities to utilizing nuclear power, to developing computers, to making astronomical flights, to corralling astro matter, to understanding the universe, to controlling existence —

## *Movement I: Neo-Tech Physics*

and beyond forever.

Integrating nature's Grand Cycle with conscious beings reveals an elegantly simple understanding of existence. That integration reveals how individual consciousness is not only an integral component of existence, but is the dominating and controlling component. For example, at either end of the Grand Cycle, all life would perish. But individual consciousness — the supreme value of the universe — must forever protect itself. Thus, conscious beings a thousand or a million years more advanced in knowledge than we on Earth have long ago *met that responsibility to preserve the supreme value of existence: individual consciousness.*

Without immortal consciousness, the Grand Cycle would inexorably and infinitely repeat itself as dictated by the natural dynamics of mass and energy. But, with consciousness, the integrating and controlling component of existence missed by Einstein, the Grand Cycle is always interdicted and truncated. Thus, the destruction of the universe and consciousness has never occurred and will never occur. In other words, by integrating conscious beings into the dynamics of existence, nature's Grand Cycle becomes hypothetical and never occurs.

### **Consciousness and Existence Integrated**

- 1) Anything theoretically possible in existence, no matter how remote the probability, will happen infinite times unless interdicted by conscious beings.
- 2) Human-like consciousness has forever been and will forever be an integral part of existence.
- 3) Conscious beings, as you and I, can

## *A Cosmology of Infinite Riches*

understand anything in existence. On gaining the knowledge, therefore, we can and will eventually do anything theoretically possible that rationally benefits our existence.

- 4) Thus, human-like conscious beings throughout the universe always have, and always will, control existence.
- 5) On curing the disease of irrationality through Neo-Tech, we Earth beings will gain the same power, prosperity, and immortality of our fellow beings who control existence throughout the universe.

### **Part 17**

#### Knowledge at the Speed of Light

Everything in existence seems limited by a universal constant — the speed of light. For, as shown by Einstein, nothing can exceed the speed of light. Consciousness, therefore, being an integral part of existence, must also be limited by the speed of light. But how can the speed of light limit knowledge, especially since consciousness has no limits on understanding anything in existence? To answer that, one must first understand the dual faculty of consciousness:

- 1) The unlimited faculty to understand anything in existence.
- 2) The limited faculty to store and process knowledge.

By nature, each new unit of knowledge begets multiple units of still newer knowledge. Thus, consciousness creates knowledge geometrically. So, then, what can limit increases in knowledge? Nothing can stop knowledge

### *Movement I: Neo-Tech Physics*

from increasing forever. But, the rate of knowledge accumulation is ultimately limited by the speed of light in our closed universe.

To understand the faculty of consciousness that stores and processes knowledge, one must first understand the history of that faculty starting with the origins of man-discovered consciousness on Earth 3000 years ago: For the first 2000 years after the discovery of consciousness, knowledge accumulated very slowly. That accumulation gradually increased as the base of knowledge increased through memory and oral communication. Knowledge then accelerated through written communication.

For man to produce great sailing ships, for example, he needed that initial 1800 years of accumulated knowledge and technology stored and passed by memory, hand-scribed documents, and oral communication. Then he needed another 1000 years of faster accumulated knowledge and technology stored and passed through written works to produce steamships and trains in further improving transportation. He needed another 100 years of more rapidly accumulating knowledge and technology stored and passed through printed works to produce automobiles that greatly improved transportation. Next, he needed only 60 more years of accelerating knowledge and technology stored and passed through books, journals, and communication equipment to produce practical airplanes that provided transportation inconceivable a century before. Finally, he needed only 40 more years of soaring knowledge and technology stored and passed through computers and electronic communications to develop space ships for landing men on the moon and building space stations.

Now, today, new knowledge is accelerating so rapidly

## *A Cosmology of Infinite Riches*

that our productive focus is shifting toward storing, processing, integrating, and transmitting information through million-dollar super computers moving toward thousand-dollar personal computers. Thus, today, computers are undergoing explosive increases in capacities, power, practicality, and economies. And from now into the future, the demands of accumulating, storing, processing, and transmitting knowledge will shift into high gear from man's limited storage-capacity brain to external extensions of the brain with electron/photon-circuited quantum computers and beyond.

Today, storing and processing our geometrically increasing knowledge depends on our developing and building increasingly efficient, man-made computers. Advancing economies and prosperity depend on developing ever more advanced devices until the capacity of every spacetime point in the universe is utilized for storing, processing, and transmitting knowledge.

Knowledge will increase geometrically for a few millennia or perhaps only a few centuries — until the building of external-knowledge devices approaches the speed-of-light limitation. From that point, the expansion of knowledge shifts from geometric to linear. Knowledge will then expand linearly, near the speed of light, and limited by the speed of light.

When our own expanding knowledge reaches that limitation, we can join the millions of other civilizations in our universe that have reached that point. We can then communicate through the universal computer (perhaps gravity-coded) and control existence as our fellow conscious beings do. For, then, the entire universe of universes expanding at near the speed of light becomes our computer and storage facility for all acquired

*Movement I: Neo-Tech Physics*

knowledge.<sup>1</sup>

The relationship of conscious knowledge to existence reduces to a single equation. To understand that equation, the following two points must be understood:

- 1) Knowledge is a function of time, which as Einstein determined is related to the speed of light.
- 2) Essentially all mega-advanced knowledge throughout the universe is generated, stored, and processed near the speed of light, limited only by the infinite Universe of universes on vectors forever expanding at near the speed of light.

Thus, knowledge ultimately obeys the same laws that all existence obeys...such as Einstein's law that integrates energy and mass with the speed of light as expressed by his famous equation:

$$\mathbf{E} = \mathbf{mc}^2$$

where:

E = energy; m = mass; c<sup>2</sup> = the speed of  
light squared

Likewise, knowledge integrates with time and the speed of light as expressed by the following equation:

$$\mathbf{K} = \mathbf{tc}^2$$

where:

K = knowledge; t = time; c<sup>2</sup> = the speed of  
light squared

Today, in our young Earthbound civilization, the

---

<sup>1</sup>Conscious beings perhaps overcome the speed-of-light limitation through eternal inflationary expansions of Gravity Units beyond our universe, into limitless existence and hyperspace.

## *A Cosmology of Infinite Riches*

always fatal disease of irrationality darkens the future for all human beings. Growing irrationality reduces and eventually stops the accumulation of new knowledge needed to survive and prosper. Growing irrationality eventually destroys the conscious mechanism for processing and accumulating knowledge. But, with the Neo-Tech discovery, irrationality can be cured worldwide to let all conscious beings forge ahead, geometrically accumulating knowledge at rates eventually limited only by the speed of light.

### **Part 18**

#### The Universe is but a Dot Next to Individual Consciousness

Every individual consciousness has the capacity to generate, process, and use new knowledge at rates approaching the speed of light. By fully understanding the effects of such knowledge production and use, one quickly rectifies the false view of life held by most people who have lived on Earth. That false view expressed in Monty Python's "Meaning of Life" and promoted by mystics throughout history is: "Individual human beings are but insignificant dots among the vast universe."

Facts and logic demonstrate the exact opposite: Without irrationality or mysticism, each individual consciousness has unlimited capacity to generate and utilize new knowledge at near the speed of light. Francis Bacon identified, "Knowledge is power." Thus, after a few millennia of such knowledge accumulation, any conscious individual gains the power to so totally dominate existence that the entire universe and all its evolutionary processes seem by comparison to shrink into static insignificance. For, in both power and significance,

## *Movement I: Neo-Tech Physics*

individual consciousness quickly soars beyond the dynamics of nature and the entire universe.

Today, on Earth, the fully integrated honesty of Neo-Tech finally reverses that mystical view bewailing mankind's insignificance. Neo-Tech demonstrates that the power of the universe shrinks to almost nothing when compared to the unlimited power of individual consciousness.

### **Part 19**

#### Who is the Creator?

Does a creator of galaxies and universes exist? Indeed, such a creator could not defy the laws of physics. Yet, today, as for the past three millennia, most people believe a creator must be some mystical higher "authority" or power as promulgated by someone's scriptures or edicts. ...For two millennia, such mystical gods of creation were conjured-up by neocheaters wanting nothing more grand than to live off the efforts of others.

As demonstrated in the balance of this chapter, everyday conscious beings like you and me work within the laws of physics to create and control all heavens and earths.

### **Part 20**

#### The Goal of Conscious Beings

Throughout the universe, conscious beings pursue their natural goals and responsibilities by achieving biological immortality, limitless prosperity, and eternal happiness. Thus, they forever preserve the supreme value of the universe: individual consciousness. For without conscious beings, no value or meaning would exist throughout the universe. ...Conscious beings free of mysticism never

## *A Cosmology of Infinite Riches*

allow their precious lives — lives of limitless value — to end.

### **Part 21**

#### Galaxies Created Beyond The Dynamics of Nature

Eons ago, a conscious being, as you and I, worked at the edge of a distant galaxy with an integrating computer of a spatial-geometry driven, mass/energy assembler. By assembling units of gravitational geometries, that person corralled enough strings of wound-up gravity to equal the mass of another galaxy. As the moment of critical gravity approached, the final collapse into an entropy-reversing, rotating “black hole” began. He then arose smiling. With arm held high, he cried, “Let there be light!”<sup>1</sup> ...At that moment, in a far corner of the universe, the light of a million times a million suns flashed and began its photonic journey across the universe. A galaxy was born...a man-made galaxy.

### **Part 22**

#### Galaxies Discovered Beyond The Dynamics of Nature

Today, eons later, specks of light from that conscious-made galaxy fall on the planet Earth — on the lens of a telescope. An astrophysicist examines computer data gathered from those specks of light. Then, integrating that data with the physical and mathematical dynamics of astral mass and energy, he moves closer to a momentous discovery. He moves closer to discovering a major astral event falling outside the natural dynamics of mass and

---

<sup>1</sup>The expression “Let there be light” was first manipulatively used in the mystical world of the Bible, then entertainingly used in the science-fiction world of Isaac Asimov, and now factually used in the objective world of Neo-Tech.

### *Movement I: Neo-Tech Physics*

energy — an event that irrevocably altered nature's charted course for the universe.

But, that scientist knows, as any competent scientist knows, that nothing, including conscious beings, can alter the axiomatic laws of physics, mathematics, and existence. And he knows that existence can have no antecedent basis or original creator. Yet, he realizes that, within the laws of physics, conscious beings can alter the natural dynamics of mass and energy. Thus, he realizes conscious beings and only conscious beings can alter nature's manifest destiny, not only here on Earth, but throughout the universe.

Combining such knowledge with computer processed data, that scientist moves closer toward directly observing the alteration of nature's Grand Cycle by conscious beings. Such direct observation may come, for example, through a correlation of computer data concerning black holes or possibly quasars and pulsars. In fact, such correlations of data probably already exist on Earth — hidden in considerable accumulations of uninterpreted data. Integrating such data could reveal that certain cosmic events exist outside the natural dynamics of their mass, energy, and gravity. In turn, that data could then demonstrate how conscious beings create and control such cosmic events as energy and galaxy creators for the eternal prosperity of all conscious life.

Thus, conscious beings could forever prevent the Grand Cycle from completing itself. They could do that, for example, by routinely creating gravity dimensions and geometries that constantly pump entropy-reversing structures back into the universe. Such constantly created, new structures would break the dynamics of the Grand Cycle, allowing the universe to forever oscillate within its

## *A Cosmology of Infinite Riches*

most efficient range for conscious beings.

### **Part 23**

#### Create Your Own Galaxy

Beginning with the data from that speck of light born a million years before, today's Earthbound scientist will discover and prove a newborn galaxy created outside the mass/energy/gravity dynamics of nature alone. He will then look toward the heavens realizing that he has discovered a galaxy made by a conscious being. He will further realize that over eternal time, over eternally interdicted cycles, all the galaxies and universes, all the heavens and Earths, were at one time created from conscious-made structure pumps that formed new realms of existence while preserving old realms.

And finally, he will realize his mind is the same conscious mind possessed by our immutable conscious cousins who create new realms of existence in other worlds and galaxies for us, them, and everyone.

### **Part 24**

#### After the Discovery

After that first discovery of a conscious-made galaxy or black hole, scientists will then approximate from our geometric increases of knowledge on Earth and our achievement of biological immortality, when you and I can stand above all the imagined gods to give the command, *Let there be light!*

### **Part 25**

#### Conclusion

No intimidating god or ethereal super consciousness reigns over the universe. Mystical gods or "higher beings"

### *Movement I: Neo-Tech Physics*

do not exist, cannot exist, need not exist. For only universes created and controlled by rational, value-producing conscious beings as you and I are needed to explain all existence. And with biological immortality, we Earth beings will someday stand smiling at the edge of space creating our own stars, galaxies, universes, collections of universes, and beyond.

### EPILOGUE

The mightiest power in existence, the power to control existence, is expressed by the great command, “Let there be light!” That power has forever existed among fellow beings throughout the universe. The essence of that power is available to all of us, now, here on Earth today through Neo-Tech. ...Neo-Tech eradicates irrationality — the disease that causes ignorance and death among conscious beings.

AIDS degenerates the body’s protective immune system into weakness, sickness, then death; irrationality and mysticism degenerates the mind’s protective thinking system into ignorance, sickness, then death. Irrationality cripples and finally destroys the conscious mind.

But unlike AIDS, an immediate cure exists right now for irrationality and its virus-like neocheaters. That cure is Neo-Tech. Curing irrationality will also bring definitive cures for AIDS, cancer, heart disease, and all other diseases harmful to conscious beings. Neo-Tech forever eradicates irrationality and its symbiotic neocheaters, allowing the individual to direct his or her life toward achieving guiltless prosperity and abiding happiness for self, others, and all society.

Neo-Tech also opens the way for knowledge expanding geometrically to eventually approach the speed of light. Every person applying Neo-Tech, therefore, holds

*A Cosmology of Infinite Riches*

unbeatable advantages over those crippled by irrationality, parasitical elites, and neocheaters. Indeed, Neo-Tech allows human beings to acquire total control over both the material and emotional realms. Neo-Tech gives all human beings on Earth today the power to execute the tripartite commands: “Let there be wealth!”, “Let there be romantic love!”, “Let there be eternal youth!”

The time has come to grow up...or be left behind to perish in a world of irrationality. Clinging to irrational or mystical beliefs such as supreme creators or “higher authorities” is as crippling to human life and prosperity as would be the clinging to the once popular belief that the Earth is flat or today’s fading belief that force-backed “authorities” or politicians can advance the well-being of any individual or society.

After 3000 years, the time has come to abandon life-destroying irrationality and all its symbiotic parasites and neocheaters. Now is the time to mature into meeting our responsibility of grooming the supreme value of the universe — our own conscious lives. Now is the time to groom our conscious minds with fully integrated honesty for limitless growth and value production forever into the future. Now is the time to join our fellow conscious beings throughout all existence in meeting our supreme responsibility to life — to live happily, prosperously with our fellow conscious beings throughout eternal existence. **For, we are the creators of all heavens and earths. ...All glory to us conscious beings!**

**Λ A Mathematical View**  
 of  
**Time, Eternity, and Existence**  
 by

Bruce Gordon, Cyberglyph, 32 Debora Drive, Plainview, NY 11803

An **instant in time**, like this or any other moment in eternity is an *infinitesimal* quantity, expressed symbolically as

$$t_i = dt$$

**Eternity (E)** is the whole of time, from the infinitely distant past to the infinitely far future, an *integrated*, infinite time interval. Using the notation of the calculus, eternity is expressed as

$$\underline{E} = \int_{-\infty}^{\infty} dt$$

A **universe (U)** is a **process in time**.<sup>1</sup> It can be thought of as a matrix-valued function of dimensionality  $(n_1, n_2, \dots)$ .

$$\underline{U} = [\mathbf{u}_{x_1 x_2 \dots}]_{(n_1, n_2, \dots)}$$

where the  $\mathbf{u}_{x_1 x_2 \dots}$  are **Gravity Units** at positions specified by the coordinates  $(x_1, x_2, \dots)$ . If the status of a gravity unit varies as a function of time then, at any given instant, a “snapshot” of that gravity unit at that instant in time would be

$$\mathbf{u}_i = \mathbf{u}(t_i)$$

The composite portrait of the whole universe at that same instant,

$$\underline{U}_i = [\mathbf{u}(t_i)_{x_1 x_2 \dots}]_{(n_1, n_2, \dots)}$$

is integrated to obtain the **equation of eternal existence**...

$$\underline{U}_E = \int_{-\infty}^{\infty} [\mathbf{u}(t)_{x_1 x_2 \dots}]_{(n_1, n_2, \dots)} dt = \left[ \int_{-\infty}^{\infty} \mathbf{u}(t)_{x_1 x_2 \dots} dt \right]_{(n_1, n_2, \dots)}$$

(See page 98 for this equation adjusted to a perceived linearity of Future mathematical steps ~~while~~ involve the relationships among consciousness, Neothink, and Gravity Units. Submissions to Neo-Tech Publishing, P.O. Box 60906, Boulder City, NV 89006 are invited.

<sup>1</sup>Existence is not in time. Time is within existence. Thus, any universe is in time within existence.

# Chapter 7

## Gravity Units

The fully integrated honesty of Neo-Tech bridges the widest gaps among physics and science — from the general relativity of cosmic gravity and beyond to the quantum mechanics of quarks and below.<sup>1</sup> Conscious life using Neo-Tech — fully integrated honesty — bridges those and other problems, great and small, to deliver eternal life, happiness, prosperity.

The controlling keys of existence are the ultimate-symmetry Gravity Units as explained in Chapter 5. Also, as explained on pages 45-46, gravity is negative energy, always pulling in toward nonmotion. Mass and energy are positive energy, always pushing out toward motion. Our universe and all existence consist of gravity, mass, and energy. The sum of all existence equals zero energy. Therefore, the total energy of (1) our universe, of (2) every universe-containing, microscopically undetectable Gravity Unit, and of (3) all vacuums is zero — nothing — as explained on pages 45-46.

No real vacuum exists in nature. All spacetime points in existence contain *existence* itself. All existence consists of Gravity Units with zero energy. Thus, any and every point in existence can be quantum fluxed into equal amounts of negative-energy gravity and positive-energy mass/energy. Then, exploding from the cold “vacuum” or “nothingness” of pure geometric gravity into a cosmic

<sup>1</sup>And, from chemical clocks of strange-attractor chaos that are strong on empirical demonstration but weak on theory...to superstrings\* of ultimate symmetry that are strong on theory but weak on empirical demonstration. ...Neo-Tech bridges those gaps.

\*Strings, not points, seem to be the basic entities of existence. Even in nature-evolved life, the string-like helix of DNA is basic.

*Movement I: Neo-Tech Physics*

inflation, that Gravity Unit forms a new universe of mass, energy, space, time, and motion.

A Metaphor

From any point above-and-below, in every vacuum state and universe, conscious beings can flux, break, or inflate Gravity-Unit symmetries into limitless new galaxies or universes. All of those actions can occur without violating the laws of physics.

Existence exists. For, existence cannot not exist. Existence is Gravity Units with fields of existence at every point in space, matter, energy, and time.<sup>1</sup> As philosopher Ayn Rand recognized, “Existence *is* identity.” Thus, Gravity Units *are* identity: the fundamental identity of existence — as is consciousness. ...The melded symmetry of consciousness and Gravity Units points the way to unifying consciousness with physics — points the way to unifying all existence.

---

<sup>1</sup>Time is always within a background of existence: Existence is not in time. Instead, time is in existence. Thus, time can be measured as changing geometric shapes in space. Indeed, spacetime is a geometry dependent on its contents and their configurations. Inside Gravity Units, time disappears into fixed spatial dimensions.

## *Gravity Units*

### Gravity Inflations, Light Cones, and Universe Creations

Existence does not smoothly reduce down to nothing or non existence. Instead, everything in nature ultimately reduces to a discrete bump, a quantum, a unit in an ether of Gravity Units (GUs), which are the eternal quantum units of existence. GUs comprise the ether substrate in which all broken symmetries exist. A GU is an unimaginably small entity with essentially zero surface at seemingly infinite curvature. Yet, each GU is still an entity, a unit of existence — the prime unit of existence with specific properties. The GU is essentially maximal symmetry: a pure symmetry of gravity or field of geometry.

But, at the boundaries of GUs are *asymmetric* regions of countless smaller, connecting Gravity Units at which quantum fluxes can inflate into separate universes. Each of those universes creates a spacetime quasi light cone that eventually meets the real light cone of every other universe evolving from that Gravity Unit to create a universe of universes many times the total size of the distance traversed at the speed of light.

For example, as shown by the illustration on page 92, magnify a Gravity Unit by a googol...or  $10^{100}$  times. The GU would now appear as unimaginably large with its highly curved surface now appearing as essentially flat. That surface is asymmetrically disrupted with bumps of countless other, smaller Gravity Units. Those disruptions can flux into universes at countless points on the surface of the GU to produce countless quasi light cones that eventually link at distances in any amounts beyond that communicated by the speed of light.

As shown on the illustration on page 92, light cones linked from Y to B'' have communicated at many times the speed of light with nothing exceeding the speed of light.

## A Gravity Unit Magnified $10^{100}$ Times fluxing into Countless Universe-Making Gravity/Light Cones

As a law of nature, everything in existence can be reduced to a smallest unit or quantum — be it an electron or quark for mass or a photon for energy. Beneath mass and energy lie resonating strings and thinkons with dimensions less than  $10^{-35}$  meters. Those strings and thinkons create spacetime mass, energy, and consciousness. Beneath those dimensions lie an ether of Gravity Units that form a universal sea of eternal geometries. Measurements through Gravity Units may someday overcome the Heisenberg Uncertainty Principle in establishing the simultaneous position and momentum of an electron to any arbitrary degree of certainty.

## MOVEMENT II

### **The Anticivilization**

*The Problem*

*Movement II: The Anticivilization*

**Unconquerable Honesty**

In this anticivilization, we each are alone in our struggle to live rationally. We have always been alone with our own honesty. That aloneness of honesty is our only unconquerable strength in this anticivilization. For, we are chained to a civilization based on dishonesty. In the end, that dishonesty cheats us of our earned rewards as we each die unnecessarily, tragically unfulfilled.

By contrast, in the Civilization of the Universe, no such struggle or dishonesty exists. In an honest culture of certainty and rationality, everyone is free — eternally free, prosperous, fulfilled.

# Chapter 8

## Unlocking the Secrets

to

## Limitless Wealth

On planet Earth, no major breakthrough of knowledge has occurred in two generations — since (1) Albert Einstein replaced Newtonian physics<sup>1</sup> with relativity and (2) a handful of brilliant physicists like Dirac and Feynman developed quantum mechanics. Why no further seminal breakthroughs? Because thinking from today’s greatest minds, such as those of Stephen Hawking and Roger Penrose, short-circuits when their wide-scope thinking turns to mysticism. Indeed, mystical bubbles reduce conscious minds to those of lost children, even the greatest minds like those of Hawking and Penrose. Thus, trapped in mysticism, new knowledge needed to deliver prosperity, both now and into the future, can no longer evolve.

In this anticivilization, the most brilliant conscious minds can no longer develop major, breakthrough knowledge. Most such brilliant minds today are stuck — limited to narrow, specialized areas — bounded by integration-blocking mysticisms. Those brilliant minds are weakened and limited by mysticism. They can be outflanked and outperformed by lower IQ minds that are

---

<sup>1</sup>Einstein did not “overthrow” Newton’s gravity. Rather, Einstein adjusted and *explained* gravity (Newton would “frame no hypotheses”). Einstein actually strengthened and solidified Newton’s inverse square law for gravity with spacetime geometry. *In context*, Newton as Einstein was, is, and will remain correct.

## *Movement II: The Anticivilization*

mystic-free — minds that can integrate wider perspectives of reality. Because of their expanding mysticisms, geniuses today are thinking and living with increasing impotence. ...So, where does the future lie?

The future lies in the Zonpower discovery: Throughout history, six seminal changes have occurred in the way mankind views itself and its world: (1) the invention of consciousness three millennia ago, (2) the Greeks' discovery of logic and its power, (3) the Renaissance's overthrow of traditional "truths" for the scientific method, (4) the Copernican revolution, (5) the Newtonian revolution, (6) Einstein's relativity and quantum mechanics. Today, the seventh seminal change arises: the unifying discovery of Neothink, Zonpower, and the Civilization of the Universe.

Zonpower delivers boundless knowledge and riches to any conscious individual. For, Zonpower frees reality from irrational illusions. Zonpower connects reality with *all* existence to bring unlimited purpose, wealth, and happiness to conscious beings.

Such wealth-producing, wide-scope integrations are easy to grasp and implement. This *Zonpower* communiqué will prepare you. First, *Zonpower* provides an entirely different way to view yourself, the world, and all existence. Second, *Zonpower* is so widely integrated yet so simply expressed that, on the first reading, you are ready to collect its guiltless riches. Then, on each subsequent reading, your powers to collect its boundless rewards expand.

How scientifically valid is Zonpower? Its mathematical models reduce to  $T1=T2k$ . Do not worry about that formula now. It is derived on page 239 and made clear throughout Part III. Such a simple formula or model can

## *Unlocking the Secrets to Unlimited Wealth*

explain most, if not all, major anomalies in today's science and physics. That universal mathematical expression meets the "simplicity-and-beauty" criterion of Nobel-prize-winning Paul Dirac. Also, for validating major theories, the  $T1=T2k$  hypothesis meets the "correspondence" criterion of Nobel-prize-winning Niels Bohr.<sup>1</sup> The "correspondence" criterion requires noncontradictory linkages with science and nature.

And, finally, valid theory must meet three other criteria: (1) offer answers to previously unanswered questions and unsolved problems, (2) offer predictability, and (3) offer many ways to verify or refute the theory. Scientific demonstration of those three criteria focuses on identifying conscious configurations encoded throughout the cosmos. That scientific verification is the object of Neo-Tech research. But, practical proof already exists: **Today, Zonpower can make you rich, happy, and healthy.**

---

<sup>1</sup>Niels Bohr's correspondence criterion should not be confused with his *complementary principle*, which means the more of one the less of the other. For example, position and momentum of a particle are complementary — the more precisely one is known the less precisely the other is known. Truth and honesty are complementary. For example, the more dogmatically one asserts truth the less honest one becomes. In other words, the more one demands truth, the less contextual or honest become the facts.

## A Linear View

### Time, Eternity, and Existence

(view from the anticivilization)

by

Justin James Evermen, Theoretical Research Department  
Iowa State University, Ames, IA 50012

**Below is an alteration** on Gordon's mathematical view of time, eternity, and existence on page 88. Gordon's equation does not explain the non circular/curved nature of time that seems to present itself to us. We see linear time. So to approximate this lineation it is necessary to take the natural log of the function. This lineates the space gravity curve and presents them as our consciousness perceives them. Just as  $1/\chi$  graphed on logxlog paper is lineated so is time by the log or ln function. And just as  $1/\chi$  appears linear on logxlog paper so does time. Thus, the necessity to lineate its curvature. So, therefore, we know  $1/\chi$  is curved as also time is curved. But in this askewed frame of reference they will both present themselves as linear.

Therefore

$$\begin{aligned}\underline{U}_E &= \int_{-\infty}^{\infty} [\ln (u(t)_{\chi_1 \chi_2 \chi_3 \dots})](n_1, n_2, \dots) dt \\ &= \int_{-\infty}^{\infty} [\ln (u(t)_{\chi_1 \chi_2 \chi_3 \dots}) dt](n_1, n_2, \dots)\end{aligned}$$

Thus the log or ln function serves to lineate the curvature that the **Gravity Units** hold. Hence, our perception of linear, not curved time.

So thus the **equation of eternal existence...**

$$\underline{U}_E = \int_{-\infty}^{\infty} [\ln (u(t)_{\chi_1 \chi_2 \chi_3 \dots}) dt](n_1, n_2, \dots)$$

Where

$t_i$  = instant of time

$\underline{U}$ =universe

$\underline{E}$ = eternity

$u_{\chi_1, \chi_2 \dots}$ =Gravity Units
